## Trademarks

Yealink®, the logo and the name and marks is trademark of Yealink (Xiamen) Network Technology CO., LTD, which are registered legally in China, the United States, EU (European Union) and other countries.

All other trademarks belong to their respective owners. Without Yealink's express written permission, recipient shall not reproduce or transmit any portion hereof in any form or by any means, with any purpose other than personal use.

## Warranty

### **(1) Warranty**

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS GUIDE ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS GUIDE ARE BELIEVED TO BE ACCURATE AND PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF PRODUCTS.

### **(2) Disclaimer**

YEALINK (XIAMEN) NETWORK TECHNOLOGY CO., LTD. MAKES NO WARRANTY OF ANY KIND WITH REGARD TO THIS GUIDE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Yealink (Xiamen) Network Technology CO., LTD. shall not be liable for errors contained herein nor for incidental or consequential damages in connection with the furnishing, performance, or use of this guide.

### **(3) Limitation of Liability**

Yealink and/or its respective suppliers are not responsible for the suitability of the information contained in this document for any reason. The information is provided "as is", and Yealink does not provide any warranty and is subject to change without notice. All risks other than risks caused by use of the information are borne by the recipient. In no event, even if Yealink has been suggested the occurrence of damages that are direct, consequential, incidental, special, punitive or whatsoever (Including but not limited to loss of business profit, business interruption or loss of business information), shall not be liable for these damages.

## End User License Agreement

This End User License Agreement ("EULA") is a legal agreement between you and Yealink. By installing, copying or otherwise using the Products, you: (1) agree to be bounded by the terms of this EULA, (2) you are the owner or an authorized user of the device, and (3) you represent and warrant that you have the right, authority and capacity to enter into this agreement and to abide by all its terms and conditions, just as if you had signed it. The EULA for this product is available on the Yealink Support page for the product.

## Patent Information

China, the United States, EU (European Union) and other countries are protecting one or more patents of accompanying products and/or patents being applied by Yealink.

## Customer Feedback

We are striving to improve our documentation quality and we appreciate your feedback. Email your opinions and comments to [DocsFeedback@yealink.com](mailto:DocsFeedback@yealink.com).

## Technical Support

Visit Yealink WIKI (<http://support.yealink.com/>) for the latest firmware, guides, FAQ, Product documents, and more. For better service, we sincerely recommend you to use Yealink Ticketing system (<https://ticket.yealink.com>) to submit all your technical issues.

## About This Guide

Yealink device management platform enables administrators to effortlessly and effectively configure and update Yealink Skype for Business HD T4XS IP phones that are deployed in the same enterprise.

There are two types of administrators: system administrators and sub-administrators. This guide provides operations for an administrator to use the Yealink device management platform.

## Related Documentations

This guide covers T48S/T46S/T42S/T41S Skype for Business phones. The following related documents are available:

- Quick Start Guides, which describe how to assemble Skype for Business phones and configure the most basic features available on Skype for Business phones.
- User Guides, which describe the basic and advanced features available on Skype for Business phones.
- Yealink Skype for Business HD IP Phones Administrator Guide, which describe how to properly configure, customize, manage, and troubleshoot the Skype for Business phones
- Auto Provisioning Guide, which describes how to provision Skype for Business phones using the configuration files.

The purpose of *Auto Provisioning Guide* is to serve as a basic guidance for provisioning Yealink phones with a provisioning server. If you are new to this process, it is helpful to read this guide.

- Description of Configuration Parameters in CFG Files, which describes all configuration parameters in configuration files.

Note that Yealink administrator guide contains most parameters. If you want to find out more parameters which are not listed in this guide, please refer to Description of Configuration Parameters in CFG Files guide.

For support or service, please contact your Yealink reseller or go to Yealink Technical Support online: <http://support.yealink.com/>.

## Typographic Conventions

Yealink documentations contain a few typographic conventions.

You need to know the following basic typographic conventions to distinguish types of in-text information:

Convention	Description
<b>Bold</b>	Highlights the items such as menus or menu selections when they are involved in a procedure or user action (for example: Click on <b>Site management</b> ).
Blue Text	Used for cross references to other sections within this documentation (for example: refer to <a href="#">Troubleshooting</a> ).
<i>Blue Text in Italics</i>	Used for hyperlinks to Yealink resources outside of this documentation such as the Yealink Technical Support website (for example: <a href="http://support.yealink.com/">http://support.yealink.com/</a> ).

You also need to know the following writing conventions to distinguish conditional information:

Convention	Description
<>	Indicates that you must enter specific information. For example, when you see <IP address>, enter Yealink device management platform's IP address.
->	Indicates that you need to select an item from a menu. For example, <b>Dashboard-&gt;Running state analysis</b> indicates that you need to select <b>Running state analysis</b> from the pull-down list of <b>Dashboard</b> .

## Hardware and Software Recommendations

The following table lists the hardware and software recommendation of Yealink device management platform.

Hardware and Software	Description
<b>CPU</b>	Intel Xeon Processor E5-2620V4, four cores, 2.1GHz or higher
<b>RAM</b>	8GB or higher
<b>Hard Drive Space</b>	250GB or higher
<b>Linux</b>	CentOS 7.0 and later

## Browser Requirements

The following browsers are supported:

- Firefox 54 or later
- Chrome 56 or later
- Microsoft Edge 15 or later
- Internet Explorer 11 or later

## Icon Instructions

Icons appearing on the Yealink device management platform are described in the following table:

Icons	Description
	Search for sub-administrators, alarms, sites, devices, user accounts, timer tasks or immediate tasks, executed tasks, CFG blocks, backups and resources.
	Edit sites, devices, user accounts, timer tasks, configuration templates, the CFG blocks and resources.
	Delete alarms, sites, devices, user accounts, timer tasks or immediate tasks, executed tasks, configuration templates, the CFG blocks, backups and resources.
	Download backups and resources.
	Enter the Device diagnostic page.
	Add devices
	Send the backup to devices and restore backups.
	View the description of alarms.
	View the system log or syslog files of devices in the specific rows.

# Getting Started

---

This chapter provides basic information for Yealink device management platform.

Topic includes:

- [Installing Yealink Device Management Platform](#)
- [Updating Yealink Device Management Platform](#)
- [Logging into the Yealink Device Management Platform as System Administrator](#)
- [Managing Sub-administrators](#)
- [Logging into the Yealink Device Management Platform as System Administrator](#)
- [Home Page Display](#)
- [Deploying the IP Phones](#)

## Installing Yealink Device Management Platform

### Before you begin

1. Review hardware and software recommendations.
2. Obtain the setup file of Yealink device management platform from the Yealink distributor or SE.
3. The "DeviceManagement\_1.0.0.25.tar.gz" is saved at the path **/usr/local**.

### To install Yealink device management platform (log into CentOS as the root user):

1. Enter terminal.
2. Run the command as below:

```
cd /usr/local
tar -zxvf DeviceManagement_1.0.0.25.tar.gz
cd /usr/local/dm_install
./install.sh install
```

After you finish the installation, it will prompt "Install Success!!!". And the folder named "yealink" appears at the path /usr/local.

```
bash-4.2# cd /usr/local
bash-4.2# tar -zxvf DeviceManagement_1.0.0.25.tar.gz
      :
      :
bash-4.2# cd /usr/local/dm_install
bash-4.2# ./install.sh install
      :
      :
=====
Install Success!!!
=====
```

```
cd /usr/local/yealink/dm/tomcat_dm/webapps/ROOT/initData
```

```
vi dm.cfg
```

And then change the IP address in the **dm.server.url** and **troubleshooting.url** for the Yealink device management platform's IP address.

```
dm.enable = 1
dm.server.url = https://10.2.62.12:28443/api
dm.server.username = %NULL%
dm.server.password = %NULL%
dm.server.connection_request_username = %NULL%
dm.server.connection_request_password = %NULL%
dm.server.version =
dm.server.http_enable = 1
dm.server.https_enable = 1
features.device_update_auto.enable = 0

troubleshooting.url = https://10.2.62.12:28443/api/v1.0/
troubleshooting.username =
troubleshooting.password =
troubleshooting.mdn =
troubleshooting.duration =
```

(The IP address of device management platform is 10.2.62.12)

```
:wq
```

```
cd /usr/local/yealink/dm/tomcat_dm/webapps/ROOT/WEB-INF/classes/config/product/
```

```
vi application.properties
```

And then change the IP address in the **system.domain.prefix** and **config.download.url.prefix** for the Yealink device management platform's IP address.

```
account.forgot.pwd.active.limit.minute = 10
system.domain.prefix = https://10.2.62.12:18443
system.client.https.port = 28443
config.download.url.prefix = https://10.2.62.12:28443/api/v1/device/download?path=
device.status.fresh.minute = 6
device.status.data.save.days = 30
```

(The IP address of device management platform is 10.2.62.12)

```
:wq
systemctl restart tomcat_dm
```

### Related topics

[Hardware and Software Recommendations](#)

## Updating Yealink Device Management Platform

If you have installed the Yealink device management platform, you can upgrade the Yealink device management platform in order to use the latest version.

### Before you begin

1. Obtain the setup file of Yealink device management platform from the Yealink distributor or SE.
2. The "DeviceManagement\_1.0.0.25.tar.gz" is saved at the path **/usr/local**.

**To update Yealink device management platform application (log into CentOS as the root user):**

1. Enter terminal.
2. Run the command as below:

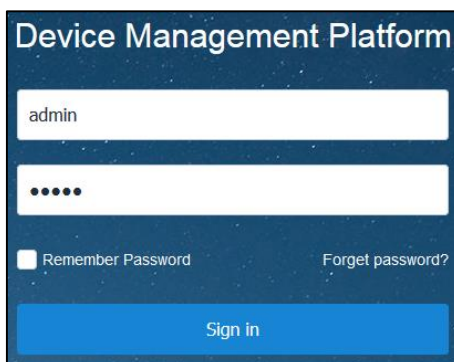

```
cd /usr/local
rm -rf dm_install
tar -zxvf DeviceManagement_1.0.0.25.tar.gz
cd /usr/local/dm_install
./install.sh upgrade
```

The Yealink device management platform will be updated to the latest version.

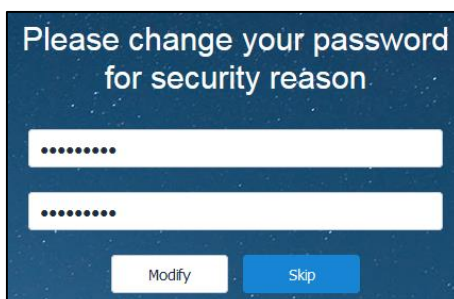

## Logging into the Yealink Device Management Platform as System Administrator

### To log into Yealink device management platform:

1. Open your Web browser.
2. Enter **https://<IP address>:<18443>/** (for example: https://10.2.62.12:18443/) in the address box, and then press the **Enter**.
3. Select your preferred language, enter your username (admin) and password (admin), and click **Sign in**.

After you first log into the platform using the default password, the system will prompt you to change the password.

4. Enter the new password and re-enter the new password to modify the default password.
5. Click **Modify** to enter the home page of Yealink device management platform directly.

### Related topics

[Why cannot you access the login page of Yealink device management platform](#)

## Managing Sub-administrators

For better IP phone management in child enterprise, the system administrator can add sub-administrators, so that sub-administrators can manage IP phones independently.

The system administrator can add, edit, search for and delete sub-administrators.

## Adding Sub-administrators

### Before you begin

1. Log into the Yealink device management platform as system administrator.
2. Configure the SMTP mailbox to send the account information to sub-administrators.

### To add a sub-administrator:

1. Click **System management->Operator**.
2. From the top right of the page, click **Add sub-administrators**.
3. Configure the login name, password (default password: Yealink@dmp), phone number, email address, office address and function list in the corresponding field.
4. Click **Save**, the sub-administrator's mailbox will receive the email which contains the account information.

You can also click **Save and add** to save the change and continue add sub-administrators.

### Related topics

[Logging into the Yealink Device Management Platform as System Administrator](#)

[Configuring the SMTP Mailbox](#)

## Editing Sub-administrators

### Before you begin

1. Log into the Yealink device management platform as system administrator.
2. Configure the SMTP mailbox to send the account information to sub-administrators.

### To edit a sub-administrator:

1. Click **System management->Operator**.
2. From the left of the page, select the desired template from the **User account/Name** list.
3. Configure the login name, password (default password: Yealink@dmp), phone number, email address, office address and function list in the corresponding field you want to edit.
4. Click **Save**, the sub-administrator's mailbox will receive the email which contains the account information.

You can also click **Save and add** to accept the change and enter the Add template page.

### Related topics

[Logging into the Yealink Device Management Platform as System Administrator](#)

[Configuring the SMTP Mailbox](#)

## Searching for Sub-administrators

You can search for sub-administrators by the login name.

### Before you begin

1. Log into the Yealink device management platform as system administrator.

### To search for sub-administrators:

1. Click **System management**->**Operator**.
2. Enter a few or all characters of the login name in the Search box.
3. Click  or press **Enter** to perform a search.

The search result displays in the User account/Name list.

### Related topics

[Logging into the Yealink Device Management Platform as System Administrator](#)

## Deleting Sub-administrators

### Before you begin

1. Log into the Yealink device management platform as system administrator.

### To delete a sub-administrator:

1. Click **System management**->**Operator**.
2. From the left of the page, select the desired operator from the **User account/Name** list.
3. Click **Delete**.

The page prompts "If delete, the data can not be recover".

4. Click **Sure**.

### Related topics

[Logging into the Yealink Device Management Platform as System Administrator](#)

# Logging into the Yealink Device Management Platform as Sub-administrator

## Before you begin

1. View the login information by emails, the following is an example of the email:

```
Dear chenyuany

You are set as Administrator for Yealink site, please use the credentials below to
sign in Yealink Device management platform https://10.2.62.12

User name : chenyuan

Password: Yealink@dmp

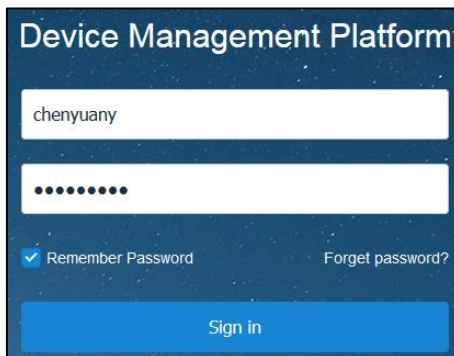

Please contact chenyuany@yealink.com if you have any question about this Email

Best Regards

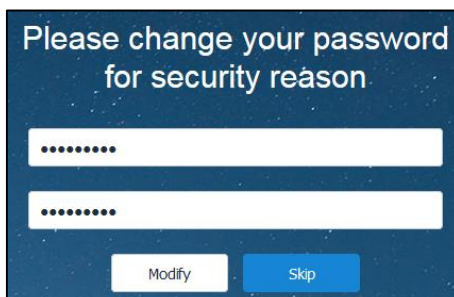

Yealink DM Platform
```

## To log into Yealink device management platform:

1. Click the URL of Yealink device management platform in emails.
2. Select your preferred language, enter your username and password (Yealink@dmp), and click **Sign in**.

After you first log into the platform, the system will prompt you to change the password.

3. Enter the new password and re-enter the new password to modify the default password.

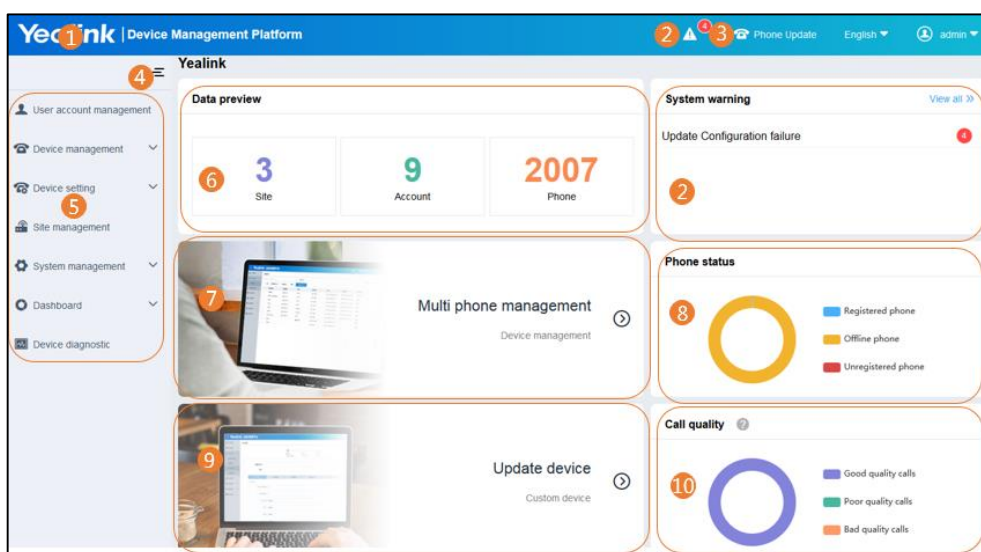

- Click **Modify** to enter the home page of Yealink device management platform directly.

**Related topics**

[Why cannot you access the login page of Yealink device management platform](#)

## Home Page Display

After you log into the Yealink device management platform successfully, the home page displays as below:

No.	Description
1	Goes to the home page quickly when you are in other pages.
2	Displays the number of warnings and the details of warnings.
3	Goes to the Updated Task page quickly.
4	Folds or unfolds the navigation pane.
5	Navigation pane.
6	Displays the number of sites, accounts and IP phones.
7	Goes to the All devices page quickly.
8	Displays the number and proportion of registered, non-registered phones and offline phones
9	Goes to the CFG block management page quickly.
10	Displays the number and proportion of the phones in good quality call, poor quality call, bad quality call. For more information on the criterion for call quality, please hover your mouse over  .

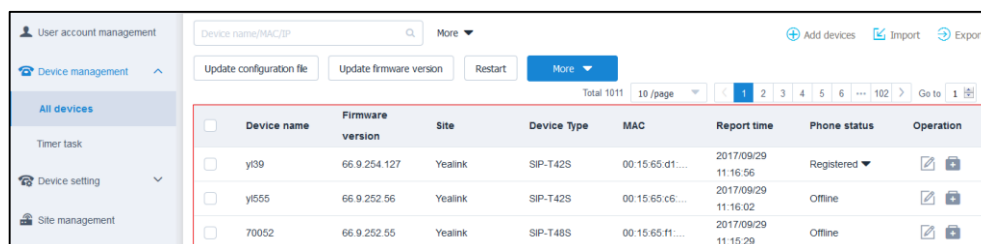

## Deploying the IP Phones

Before you manage the IP phones using Yealink device management platform, you should deploy the IP phone.

### To deploy the IP phones:

1. You plug the IP phones into the network.
2. The IP phones perform mutual TLS authentication using default certificates (see [Using Certificates for Mutual TLS Authentication](#) on page 9).
3. The IP phones obtain the provisioning server address in the following ways:
  - **DHCP option 66, 43, 160 or 161.**  
The DHCP option value must meet one of the following format: **http://<IP address>:<28080>/api/v1/getDmConfigFile.cfg** (for example: `http://10.2.62.12:28080/api/v1/getDmConfigFile.cfg`) or **https://<IP address>:<28443>/api/v1/getDmConfigFile.cfg** (for example: `https://10.2.62.12:28443/api/v1/getDmConfigFile.cfg`).
  - **Phone flash** (see [Obtaining the Provisioning Server Address from Phone Flash](#) on page 10)

After the IP phones connect to the platform, the IP phones' information will display in the All devices list.

The screenshot shows the 'All devices' page in the Yealink device management platform. The interface includes a search bar for 'Device name/MAC/IP', buttons for 'Update configuration file', 'Update firmware version', and 'Restart', and a 'More' dropdown menu. A table displays a list of devices with columns for Device name, Firmware version, Site, Device Type, MAC, Report time, Phone status, and Operation. The table shows three devices: 'y139', 'y1555', and '70052'. The 'y139' device is 'Registered', while the others are 'Offline'.

Device name	Firmware version	Site	Device Type	MAC	Report time	Phone status	Operation
y139	66.9.254.127	Yealink	SIP-T42S	00:15:65:d1...	2017/09/29 11:16:56	Registered	[Edit] [Refresh]
y1555	66.9.252.56	Yealink	SIP-T42S	00:15:65:c6...	2017/09/29 11:16:02	Offline	[Edit] [Refresh]
70052	66.9.252.55	Yealink	SIP-T48S	00:15:65:f1...	2017/09/29 11:15:29	Offline	[Edit] [Refresh]

### Related topics

[Viewing Devices](#)

[Viewing User Accounts](#)

## Using Certificates for Mutual TLS Authentication

To allow the Yealink device management platform and IP phone to authenticate each other, the platform supports mutual TLS authentication using default certificates.

### Configuring Trusted Certificates

When an IP phone requests an SSL connection with the platform, the IP phone should verify that whether the platform can be trusted. The platform sends its certificate to the IP phone and the IP phone verifies this certificate based on its trusted certificates list.

**To configure trusted certificates via the web user interface of IP phone:**

1. Log into the web user interface of IP phone.
2. Click on **Security->Trusted Certificates**.
3. Select **Enabled** from the pull-down list of **Only Accept Trusted Certificates**.

The IP phone will verify the platform certificate based on the trusted certificates list. Only when the authentication succeeds, the IP phone will trust the platform.

**Related topics**

[Configuring Device Certificates](#)

## Configuring Device Certificates

When the platform requests an SSL connection with an IP phone, the IP phone sends a device certificate to the platform for authentication.

**To configure device certificates via the web user interface of IP phone:**

1. Log into the web user interface of IP phone.
2. Click on **Security->Server Certificates**.
3. Select **Default Certificates** from the pull-down list of **Device Certificates**.

The IP phone will send the default device certificate to the platform for authentication.

## Obtaining the Provisioning Server Address from Phone Flash

The IP phones can obtain the provisioning server address from the phone flash. To obtain the provisioning server address by reading the phone flash, make sure the configuration is set properly.

**To configure the phone flash via the web user interface of IP phone:**

1. Log into the web user interface of IP phone.
2. Click on **Settings->Auto provision**.
3. Enter the URL the provisioning server in the **Server URL** field.

The URL must meet one of the following format:

- **http://<IP address>:<28080>/api/v1/getDmConfigFile.cfg** (for example: http://10.2.62.12:28080/api/v1/getDmConfigFile.cfg).
  - **https://<IP address>:<28443>/api/v1/getDmConfigFile.cfg** (for example: https://10.2.62.12:28443/api/v1/getDmConfigFile.cfg).
4. Click **Autoprovision Now** to trigger the phone to connect to the platform immediately.

## Basic Operation

This chapter provides basic operating instructions for Yealink device management platform.

Topic includes:

- [Administrator Account Management](#)
- [Log out of the Administrator Account](#)

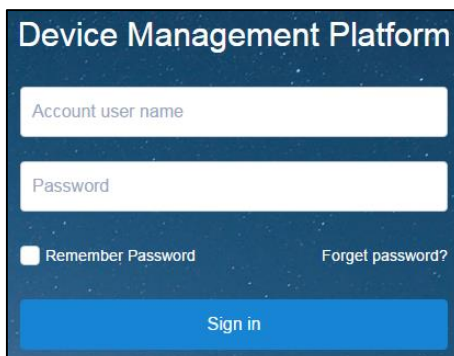

## Administrator Account Management

### Forgetting Password

If you forget password, you have to click **Forget password?** to reset password.

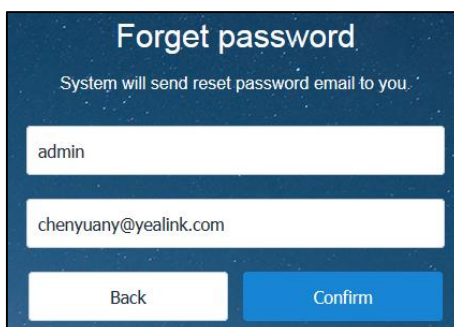

**To reset password:**

1. Open your Web browser.
2. Enter **https://<IP address>:<18443>/** (for example: **https://10.2.62.12:18443/**) in the address box, and then press the **Enter**.
3. Select your preferred language, and then click **Forget password?**

The screenshot shows the login interface of the Device Management Platform. It features a dark blue header with the title "Device Management Platform". Below the header are two input fields: "Account user name" and "Password". There is a checkbox labeled "Remember Password" and a link labeled "Forget password?". At the bottom, there is a blue "Sign in" button.

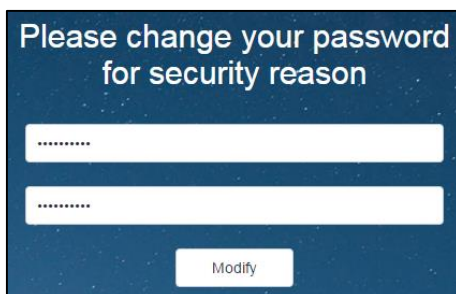

4. Enter your username and registered email in the corresponding field.

The screenshot shows the "Forget password" page. It has a dark blue header with the title "Forget password" and a subtitle "System will send reset password email to you.". Below the header are two input fields: one containing "admin" and another containing "chenyuany@yealink.com". At the bottom, there are two buttons: "Back" and "Confirm".

5. Click **Confirm**.

6. Log into your registered email and click the link to set a new password in 24 hours.
7. Enter the new password and re-enter the password to confirm.

8. Click **Modify** to reset the password.

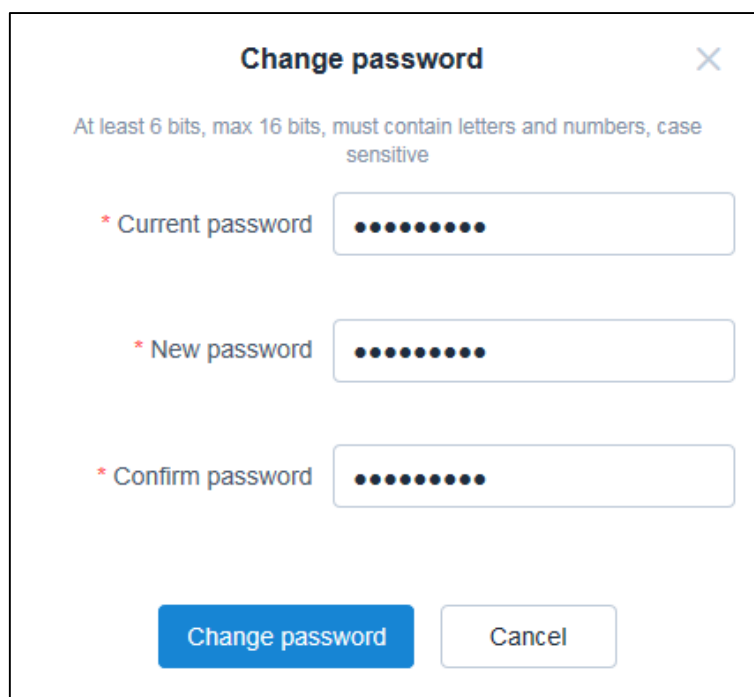

## Editing Login Password

### Before you begin

1. Log into the Yealink device management platform as system administrator or sub-administrator.

### To edit login password:

1. Click the user name on the top-right of the page, and then click **Account Settings**.
2. Click **Reset**.
3. Enter the current password, new password and re-enter the new password to confirm.

4. Click **Change password**.

### Related topics

You can log out of the administrator account.

### To log out of the administrator account:

1. Click the user name on the top-right of the page.

2. Click **Exit** to log out of the current administrator account and return to login page.

## Monitoring and Managing the Devices

---

After you log into the Yealink device management platform as system administrator or sub-administrator, you can monitor and manage the IP phones in the enterprise.

Topic includes:

- [Viewing the Call Quality Statistics](#)
- [Monitoring Alarms](#)
- [Searching for Alarms](#)
- [Deleting Alarms](#)
- [Managing Sites](#)
- [Managing Devices](#)
- [Managing User Accounts](#)

### Viewing the Call Quality Statistics

The running state analysis mainly reflect the call quality statistics, which collects QoE (Quality of Experience) of the IP phone.

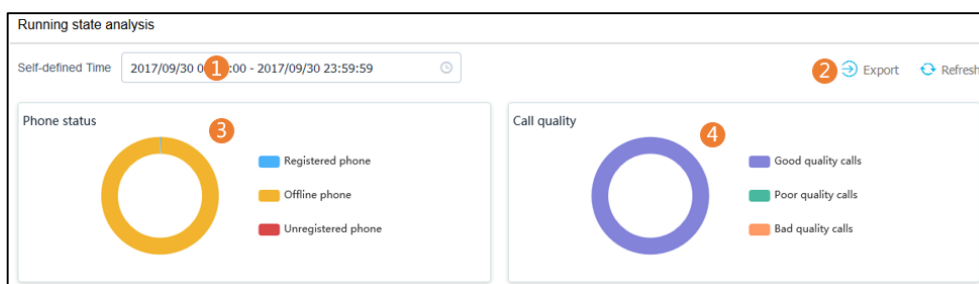

The Running state analysis page let you quickly identify the following:

- The number and proportion of registered, non-registered phones and offline phones
- The number and proportion of the IP phones in good quality call, poor quality call, bad quality call.
- The basic IP phone information which includes display name of the IP phone, the site of IP phone, the MAC address of the IP phone, the IP phone model, the firmware version, the call type and call quality.
- The call information which includes the local URI, remote URI, start time, duration, jitter, mac jitter and average loss rate.

**To view the call quality statistics:**

1. Click **Dashboard->Running state analysis**.

2. Do one of the following:

No.	Description
1	Select time. The page will display the call quality during the selected time.
2	Export the report which collects the detail of the IP phone's call quality statistics during the selected time, and then save it in your local system.
3	Pie chart shows the number and proportion of registered IP phones, unregistered IP phones and offline IP phones.
4	Pie chart shows the number and proportion of the IP phones in good quality call, poor quality call, bad quality call.

You can also view the detail of the IP phone's call quality statistics during the specific time in Call quality detail view list.

**To view the call quality statistics in Call quality detail view list:**

1. Click **Dashboard->Running state analysis**.
2. (Optional.) Enter the a few or all characters of display name, MAC address and local URL in the Search box.

You can also click **More** to unfold more conditions, select the desired condition, and then click **Search**.

The number of IP phones which meet the search conditions in different models and in different firmware versions is displayed as below:

Device model	count	Firmware version	count
SIP-T42S	21	66.9.254.111	23
SIP-T46S	17	66.9.252.46	17
SIP-T41S	2		

3. (Optional.) Click **More indicators** to customize the title in the list.

Check the desired items checkboxes, the selected items will display in the title.

**Basic telephone information:**

DisplayName  Site  Mac Address  Model  Firmware

**Call correlation:**

CallType  Quality  LocalURL  RemoteURL  StartTime

Duration

If you want to view the rest items, click  .

DisplayName	Site	Mac Address	Model	Firmware	CallType	Quality	Operation
y1554	Yealink	00:15:65:f1:c3...	SIP-T48S	66.9.252.58	meeting	Good	
y1555	Yealink	00:15:65:f1:c4...	SIP-T48S	66.9.252.58	p2p	Good	

## Monitoring Alarms

When the IP phones are in the abnormal status, they will send alarms to the platform and the administrator can monitor the alarm to troubleshoot problems.

## Configuring the SMTP Mailbox

The SMTP mailbox is used to send the warning emails, account information to sub-administrators and so on.

SMTP mailbox settings parameters are described below:

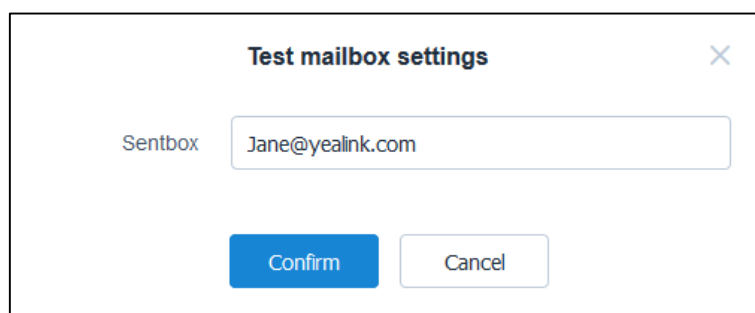

Parameter	Description
<b>SMTP</b>	Specifies the address of the SMTP server.
<b>Sender</b>	Configures the email address that is permitted to be used for sending email using SMTP server and account.
<b>Username</b>	Specifies a valid account on the SMTP server.
<b>Password</b>	Specifies the password on the SMTP server.
<b>Port</b>	Specifies the port on the SMTP server to connect to. <b>Default:</b> 25
<b>This server requires secure connection to the</b>	Enables or disables connection security. If connection security is enabled, you should specify the type of connection security to use based on the type of SMTP server. <ul style="list-style-type: none"> <li><b>SSL</b></li> </ul>

Parameter	Description
	<ul style="list-style-type: none"> <li><b>TLS</b></li> </ul>
<b>Enable the mailbox</b>	Enables or disables the mailbox. <b>Default:</b> Disabled

**To configure the SMTP mailbox:**

1. Click **System management->Mailbox setting**.
2. Configure the SMTP mailbox.
3. (Optional.) Check the **This server requires a secure connection to the** checkbox, and then select **SSL** or **TSL** from the pull-down list.
4. Check the **Enable the mailbox** checkbox.
5. (Optional.) **Test mailbox settings**.

Enter the email address of the recipient in the **Sentbox** field.

6. Click **Confirm** to test to test whether the email address you set is available.  
If the mailbox has connected successfully, the page prompts "Test successfully". If not, please edit the mailbox parameter based on the prompt message.
7. Click **Save**.  
After you configure the SMTP mailbox, you need confirm that your administrator account's mailbox is configured to receive the warning email.

[Editing the Administrator Account](#)

## Viewing Alarms

If you are the system administrator, you can view alarms via the Yealink device management platform or emails which includes the warning in critical or major severity.

If you are the sub-administrator, you can only view alarms via the Yealink device management platform.

**Before you begin:**

1. Configure the SMTP mailbox to send the warning emails to system administrators.
2. Configure the mailbox of system administrator account to receive the warning email.

**To view alarms via emails as system administrator:**

The following is an example of the email:

```
Critical alarm as below ,please check.

Alarm description:This Alarm is activated when failing to update configuration by
remote action.

MAC address:001565aea497

IP:10.10.18.75

Action time:2017-09-14 15:56:19
```

**To view alarms via the Yealink device management platform:**

1. Click **Dashboard->Warning list**.

The alarm page will display the device name, the site of device, the IP address of the device, the alarm severity, the data and time of receipt of the alarm and the alarm type.

And you can click  to view the description of alarm or click  in **Operation** column to enter the Device diagnostic page of the device.

You can also click **Export** on the top right of the page to export the alarms file, and then save it in the local system.

The following is an example of alarms file:

Device Name	Site	IP	Severity	Alarm	Type
Nevin	Yealink	10.15.6.29	Critical	2017-08-17 14:50:20	Register fai
Nevin	Yealink	10.15.6.29	Critical	2017-08-17 14:48:55	Register fai

**Note**

Please refer to [Appendix: Alarm Type](#) for more information on the alarm type.

## Searching for Alarms

You can search for alarms by device name, IP address, site, severity and alarm type.

### To search for alarms:

1. Click **Dashboard->Warning list**.
2. Enter a few or all characters of device name or IP address in the Search box.  
Click  or press **Enter** to perform a search. The page will display the search results.  
You can also click **More** to unfold more condition, select the desired condition, and then click **Search**.

## Deleting Alarms

You can delete alarms in warning list.

### To delete alarms:

1. Click **Dashboard->Warning list**.
2. In the warning list, you can:
  - Check the desired alarm checkbox.
  - Check the multiple checkboxes.
 If you want to check all checkboxes, you can check the checkbox as following:

<input checked="" type="checkbox"/>	Device Name	Site	IP	Severity	Alarm Time	Type	Operation
<input checked="" type="checkbox"/>		haodela	10.10.18.75	Critical	2017/09/14 15:56:19	Update Configuration failure	 
<input checked="" type="checkbox"/>	杨林董	haodela	10.2.10.51	Minor	2017/09/14 14:42:06	SRTP failure	 

3. Click **Delete**.

The page prompts "After delete, the data can't be recover?".

4. Click **OK**.

## Managing Sites

To control the IP phones in the same site, you can divide sites according to logic or physical location. The default site named "Yealink" is added by default.

## Adding Sites

### Adding Sites Manually

**To add sites manually:**

1. Click **Site management**.
2. From the top right of the page, click **Add Site**.
3. Enter name and description in the corresponding fields.
4. Click **Save**.

You can also click **Save and add** to save the change and continue add sites.

**Related topics**

[Editing the Sites of User Accounts](#)

## Importing Sites

If you want to add multiple sites quickly, you can import sites.

**To download a blank template:**

1. Click **Site management**.
2. From the top right of the page, click **Import**.
3. Click **Template download** to download a blank .xls file.
4. Add the site information to the template and save it to your local system.

*Name	Description
63 floor	41
51 floor	50

**To import sites:**

1. Click **Select file** to import the file saved in local system.
2. Click **Save** to complete importing sites.

### Note

The format of file must be .xls or .xlsx.

The Yealink device management platform supports you to import 100 sites at most.

### Related topics

## Editing Sites

### To edit sites:

1. Click **Site management**.
2. Select the desired site in the Site Name list.
3. Enter name and description in the corresponding fields you want to edit.
4. Click **Save**.

### Related topics

[Editing the Sites of User Accounts](#)

## Searching for Sites

You can search for sites by site name.

### To search for a site:

1. Click **Site management**.
2. Enter a few or all characters of site name in the Search box.
3. Click  or press **Enter** to perform a search.

The search result displays in the Site Name list.

## Deleting Sites

You can delete sites in the Site Name list.

Note that if there are user accounts in the site or the site is the default site named "Yealink", you cannot delete it.

### To delete sites:

1. Click **Site management**.
2. Select the desired site in the Site Name list.
3. Click **Delete**.

The page prompts "After delete, the data can't be recover?".

4. Click **OK**.

## Managing Devices

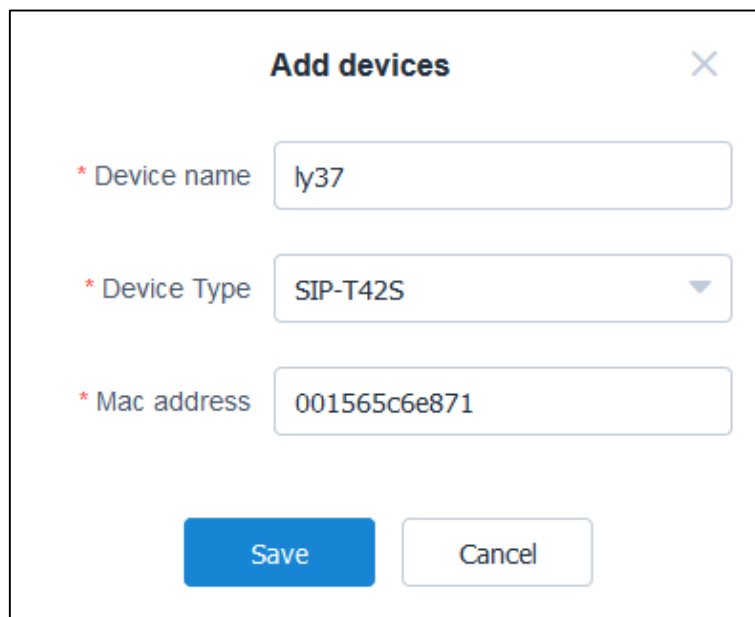

Yealink management device platform can store up to 4000 IP phones at most.

### Adding Devices

#### Adding Devices Manually

**To add devices manually:**

1. Click **Device management**->**All devices**.
2. From the top right of the page, click **Add devices**.
3. Configure the IP phone information in the corresponding filed.

A screenshot of the 'Add devices' form. The title bar says 'Add devices' with a close button (X) on the right. The form contains three required fields, each marked with an asterisk (\*):  
1. 'Device name' with the value 'ly37'.  
2. 'Device Type' with a dropdown menu showing 'SIP-T42S'.  
3. 'Mac address' with the value '001565c6e871'.  
At the bottom, there are two buttons: 'Save' (blue) and 'Cancel' (white with a grey border).

4. Click **Save**.

The IP phone will display in the All devices list.

## Importing Devices

If you want to add multiple IP phones quickly, you can import IP phones.

### To download a blank template:

1. Click **Device management**->**All devices**.
2. From the top right of the page, click **Import**.
3. Click **Template download** to download a blank .xls file.
4. Add the IP phone information to the template and save it to your local system.

*Mac	*Model	Name
001565D1D129	T42S	y137
001665D1D129	T41S	y136

### To import devices:

1. Click **Select file** to import the file saved in local system.
2. Click **Save** to complete importing IP phones.

**Note** The format of file must be .xls or .xlsx.

## Viewing Devices

If the IP phones connect to the platform, they will send the IP phone information to the Yealink device management platform, and the IP phones' information will display in the All devices list.

Note that if the IP phone registers the SFB account, the device name refers to the display name of SFB account.

### To view devices:

1. Click **Device management**->**All devices**.

The page will display device name, firmware version, the site of device, device type, MAC address, report time and phone status.

If the IP phone has registered SFB account, you can click **Registered** in **Phone status** column to view the user account, IP address, subnet address, SIP server and DND status.

Device name	Firmware version	Site	Device Type	MAC	Report time	Phone status
<input type="checkbox"/> Hans Zeng	66.9.254.89	Yealink	SIP-T46S	001565b4aece	2017-08-17 20:06:15	Registered

## Sending Messages to Devices

If you want to announce events to users, you can send the message to IP phone and configure the duration during which the message displays on the IP phone screen.

The duration supported are 5s, 30s, 1min and 30min.

### To sending messages to devices:

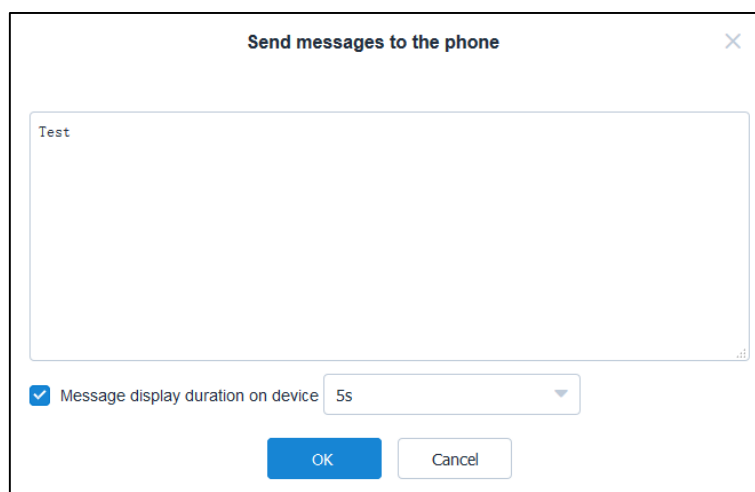

- Click **Device management**->**All devices**.
- Check the checkbox or multiple checkboxes besides the device name.
- Click **More**, and then select **Send message** from the pull down list.

Device name	Firmware version	Site	MAC	Report time	Phone status	Operation
<input type="checkbox"/> 黄颖艺	66.9.252.47	Yealink Xiamen	00:15:65:c0:...	2017/09/20 16:08:59	Registered	<input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> y1554	66.9.252.47	haodela	00:15:65:f0:1...	2017/09/20 16:08:51	Registered	<input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> y139	66.9.254.120	Yealink Xiamen	00:15:65:d1:...	2017/09/20 16:08:34	Unregistered	<input type="checkbox"/> <input type="checkbox"/>

- Enter the message in the text box.
- Check the **Message display duration on device** checkbox, and then select the desired time from the pull-down list.

The checkbox is checked by default.

If the checkbox is not checked, the duration is "5s" by default.

6. Click **OK**.

The IP phone screen displays the message immediately, shown as below:

(Take the T46G Skype for Business phone as an example)

## Updating the Yealink Better Together over Ethernet Connector

If you have paired your IP phone with the Skype for Business client, you can upload the Yealink Better Together over Ethernet (BToE) Connector via Yealink device management platform to update the BToE connector.

**To update the BToE connector:**

1. Click **System management**-> **Resources management**.
2. From the right top of the page, click **Add resources**.
3. Select **BToE** in the **Resource Type** field.
4. Configure the BToE connector information in the corresponding field.

5. Click **Save**, and then restart the BToE connector, it will update to the version you upload.

**Note** The format of file must be .exe or .msi. And the size of file is less than 100M.

## Uploading the Skype for Business License

If IP phones aren't running Skype for Business firmware, while you want to upgrade firmware to a Skype for Business firmware, then a Skype for Business feature license is needed to be uploaded to the Skype for Business phone after the update. Contact Yealink resellers to purchase the license.

### To update the Skype for Business license:

1. Click **System management**->**Resources management**.
2. From the right top of the page, click **Add Resources**.
3. Select **Lync Phone License** in the **Resource Type** field.
4. Configure the license information in the corresponding field.
5. Click **Save**.

According to the MAC address, the license will be sent to the related IP phones.

**Note** The format of license must be <MAC address>.dat file or .zip file to upload multiple licenses.

## Music on Hold

Music on Hold (MOH) allows an audio source to be played to held parties in Call Hold scenarios. To customize the music of MOH, you can upload the music file.

### To upload music file:

1. Click **System management**->**Resources management**.
2. From the right top of the page, click **Add Resources**.
3. Select **MOH** in the **Resource Type** field.
4. Configure the MOH information in the corresponding field.
5. Click **Save**, the MOH information displays in the Resources management list.
6. Click  to copy the URL of MOH file.
7. Go to Template management page to paste the URL in **MOH URL** field, and then update the configuration files.

## Upgrading a Normal Ringtone

To customize the normal ringtone, you can upload the music file.

IP Phone's ringtones are used to indicate incoming calls and distinguish your IP phone from your neighbor's.

### To upload music file:

1. Click **System management**->**Resources management**.
2. From the right top of the page, click **Add Resources**.
3. Select **Ringtone** in the **Resource Type** field.
4. Configure the ringtone information in the corresponding field.
5. Click **Save**, the ringtone information displays in the Resources management list.
6. Click  to copy the URL of ringtone file.
7. Go to Template management page to paste the URL in **Ringtone URL** field, and then update the configuration files.

## Uploading a Language Package

To customize the translation of the existing language on the IP phone user interface or make new languages (not included in the available language list) available for use on the IP phone user interface, you can upload a language package.

You can ask the distributor or Yealink FAE for language packs. You can also obtain the language packs online:

<http://support.yealink.com/documentFront/forwardToDocumentFrontDisplayPage>.

### To upload a language package:

1. Click **System management**->**Resources management**.
2. From the right top of the page, click **Add Resources**.
3. Select **Language package** in the **Resource Type** field.
4. Configure the language package information in the corresponding field.
5. Click **Save**. The language package information displays in the Resources management list.

6. Click  to copy the URL of language package file.
7. Go to Template management page to paste the URL in **GUI Language URL** field, and then update the configuration files.

## Importing Contact Lists

To can manage your IP phone's local directory, you can add multiple contacts at a time and/or share contacts between IP phones using the local contact template file.

After you import the local contact template file to Yealink device management platform and specify the access URL of the template file in the configuration files. The existing local contacts on the IP phones will be overridden by the downloaded local contacts.

You can ask the distributor or Yealink FAE for local contact template. You can also obtain the local contact template online:

<http://support.yealink.com/documentFront/forwardToDocumentFrontDisplayPage>.

Yealink Skype for Business phones support the \*.xml and \*.csv format contact list files.

## Importing XML Contact Lists

#### To import a XML contact file:

1. Click **System management**->**Resources management**.
2. From the right top of the page, click **Add Resources**.
3. Select **XML Contacts** in the **Resource Type** field.
4. Configure the XML contacts file information in the corresponding field.
5. Click **Save**. The XML contacts information displays in the Resources management list.
6. Click  to copy the URL of XML contacts file.
7. Go to Template management page to paste the URL in **Import Local Contact File** field, and then update the configuration files.

## Deleting Devices

You can delete IP phones in the All devices list.

### To delete devices:

1. Click **Device management**->**All devices**.
2. In the All devices list, you can:
  - Check the desired IP phone checkbox.
  - Check the multiple IP phone checkboxes.

If you want to check all checkboxes, you can check the checkbox as following:

<input checked="" type="checkbox"/>	Device name	Firmware version	Site	Device Type	MAC	Report time	Phone status	Operation
<input checked="" type="checkbox"/>	Hans		eeee	SIP-T46S	00:15:65:b4:...		Offline	
<input checked="" type="checkbox"/>	YLTEST4985				22:33:44:55:...		Offline	
<input checked="" type="checkbox"/>	YLTEST4983				22:33:44:55:...		Offline	

3. Click **More**, and then select **Delete** from the pull down list.

<input type="checkbox"/>	Device name	Firmware version	Site	Device Type	MAC	Report time	Phone status	Operation
<input type="checkbox"/>	杨林蕾	66.9.254.111	haodela		00:15:65:c0:...	2017/09/15 14:42:08	Registered ▼	
<input checked="" type="checkbox"/>	yf183	66.9.254.117	haodela		00:15:65:ae:...	2017/09/15 14:41:57	Registered ▼

The page prompts "After delete, the data can't be recover?".

4. Click **OK**.

## Managing User Accounts

### Adding User Accounts

#### Adding User Accounts Manually

If you have added IP phones which are not registered SFB accounts, you can add the user account to be associated with the IP phone. The user account information will send to the IP phone, and then the IP phone registers the SFB account.

The platform supports two sign-in methods to sign into Skype for Business Server.

- **User Account:** This method uses the user's credentials (user name, password and sign-in address) to sign into Skype for Business server.
- **PIN Code:** This method uses the user's phone number (or extension) and personal identification number (PIN) to sign into Skype for Business server.

**To add user accounts manually:**

1. Click **User account management**.
2. From the top right of the page, click **Add account**.
3. Configure the user account information.

**Add account**

\* Login Type: User Account

\* User account: yl30@yealinksfb.com

\* Password: ●●●●●●●●

\* Display name: yl30

Server address: yl30@yealinksfb.com

\* Site: Yealink

Phone: + Add

SIP-T41S: 11-88-99-77-4f-e4 ✘

SIP-T42S: 00-15-65-f0-17-3c ✘

Save Save and Send Cancel

4. Click **Save**.

You can also click **Save and Send** to accept the change and send the user account information to the IP phone immediately.

## Importing User Accounts

If you want to add multiple user accounts quickly, you can import user accounts.

### To download a blank template:

1. Click **User account management**.
1. From the top right of the page, click **Import**.
2. Click **Template download** to download a blank .xls file.
3. Add the user account information to the template and save it to your local system.

*Username	*Password	*ServerAddress	DisplayName	Mac
y131@yealink.com	Yealink31	y131@yealink.com	y131	001565D1D129
y132@yealink.com	Yealink31	y132@yealink.com	y132	001565D1D130

### To import user accounts:

1. Click **Select file** to import the file saved in your local system.
2. Click **Save** to complete importing user accounts.

### Note

The format of file must be .xls or .xlsx.

If an IP phone has associated with the user account A, the same IP phone was associated with user account B in your template. After you import the template, the IP phone will be associated with user account B instead of user account A.

## Viewing User Accounts

If the IP phone are registered a SFB account, after the IP phone connects to the platform, the SFB account will also display in the User account list.

### To view the user account:

1. Click **User account management**.

The page will display user name, display name, the site of user accounts and paired phone.

If the user account is associated with the IP phone, you can click display name in **Paired phone** column to view the details.

User name	Display name	Site name	Paired phone	Operation
<input type="checkbox"/> 70054@yealinkuc.com	70054	Yealink	70054 ▼	
<input type="checkbox"/> y137@yealinksf.com	y137	Allocated:1		
<input type="checkbox"/> y11578@yealink.com	Hans Zeng	Display name	MAC address	Model
<input type="checkbox"/> y10313@yealink.com	Nevin	70054	001565f1c435	SIP-T48S

You can also click **Export** on the top right of the page to export the user account files, and then save it to your local system.

The following is an example of user account file:

User Account	Password	Server Address	Display Name	Region	Device 1 Name	Device 1 MAC Ad	Device 1 IP Phone Model
test367	test367	test267@yealink.cc	test367	Yealink_Xiamen	y0012	001565c0ba7b	SIP-T465
test265	test265	test155@yealink.cc	test265	Yealink_Xiamen	y0012	001565c0ba7b	SIP-T465

## Editing User Accounts

### To edit the user account:

1. Click **User account management**.
2. Check the desired checkbox besides the user name.
3. From the right of the page, click  .
4. Configure the user account information in the corresponding filed you want edit.

If you delete the IP phones which are associated with the user accounts, the IP phones will sign out of the SFB accounts.

5. Click **Save**.

You can also click **Save and Send** to accept the change and send the user account information to the IP phone immediately.

## Searching for User Accounts

You can search for user accounts by user name, display name, the site of user accounts and paired phone status.

### To search for user accounts:

1. Click **User account management**.
2. Enter a few or all characters of user name and display name in the Search box.  
Click  or press **Enter** to perform a search. The page will display the search results.  
You can also click **More** to unfold more condition, select the desired condition, and then click **Search**.

## Editing the Sites of User Accounts

If the site of user accounts has changed, you can edit the site.

### Before you begin:

1. Add or edit the site.

**To edit the sites of user accounts:**

1. Click **User account management**.
2. Check the desired checkbox besides the user name.
3. Click **Site settings**.

Site settings		Batch delete		Total 26	10 /page	1	2	3	Go to 1
<input type="checkbox"/>	User name	Display name	Site name	Paired phone	Operation				
<input type="checkbox"/>	yl176@yealink.com	yl176	eeee	▼	✎

## Adding Timer Tasks

If you want to update configuration files, update firmware, restart, reset to factory, enable DND feature or disable DND feature in specific time, you can add timer tasks.

### Before you begin

1. To update configuration files, add the configuration template.
2. To update the phone firmware, add the phone firmware.

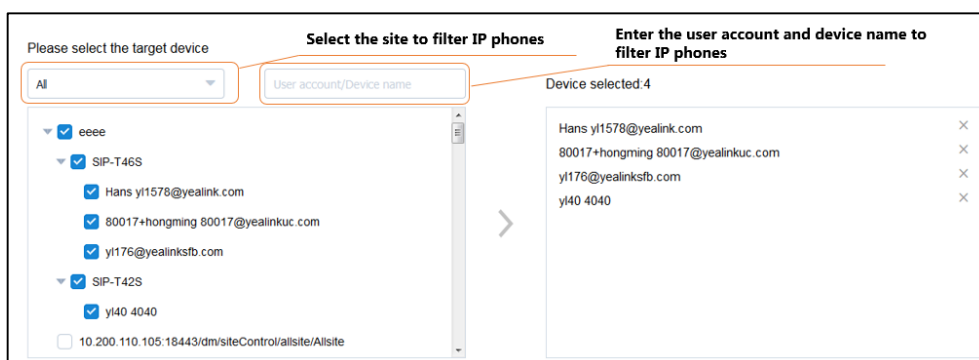

### To add timer tasks:

1. Click **Device management->Timer task**.
2. Select **Timer task**.

Task name	Task content	Repeat	Execution time	Status	Enable	Operation
update configura...	update_configbl...	immediately	2017/09/15 14:35	normal	<input type="checkbox"/>	
update configura...	update_configbl...	immediately	2017/09/15 14:31	normal	<input type="checkbox"/>	

3. From the top right of the page, click **Add timer task**.

- Select the desired IP phone on the left of the page, the IP phone will display in the **Device selected** list.

- Configure the task and executive mode in the corresponding field.
- Click **Save**.

## Viewing Timer Tasks

If you add timer tasks in the Timer task page or the All devices page, the timer tasks will display in the Timer task list.

### To view timer tasks:

- Click **Device management->Timer task**.

The page will display task name, task content, repeat, execution time and status.

## Editing Timer Tasks

You can enable or disable the timer tasks, and you can also edit the timer task information.

### To enable timer tasks:

- Click **Device management->Timer task**.
- Select **Timer task**.

3. Check the desired checkbox besides the task name.
4. Click the checkbox in the **Enable** column.

**To edit timer task information:**

1. Click **Device management->Timer task**.
2. Select **Timer task**.

3. Check the desired checkbox besides the task name.
4. From the right of the page, click  .
5. Configure the timer task information in the corresponding field.
6. Click **Save**.

## Searching for Timer Tasks or Immediate Tasks

You can search for timer tasks or immediate tasks by task name, task content and task status.

**To search for timer tasks or immediate tasks:**

1. Click **Device management->Timer task**.
2. Select **Timer task**.

3. Enter a few or all characters of task name in the Search box.  
 Click  or press **Enter** to perform a search. The page will display the search results.  
 You can also click **More** to unfold more condition, select the desired condition, and then click **Search**.

## Deleting Timer Tasks or Immediate Tasks

You can delete timer tasks or immediate tasks in the Timer task list.

**To delete timer tasks or immediate tasks:**

1. Click **Device management->Timer task**.
2. Select **Timer task**.

3. In the Timer task list, you can:
  - Check the desired checkbox besides the task name.
  - Check the multiple checkboxes besides the task name.

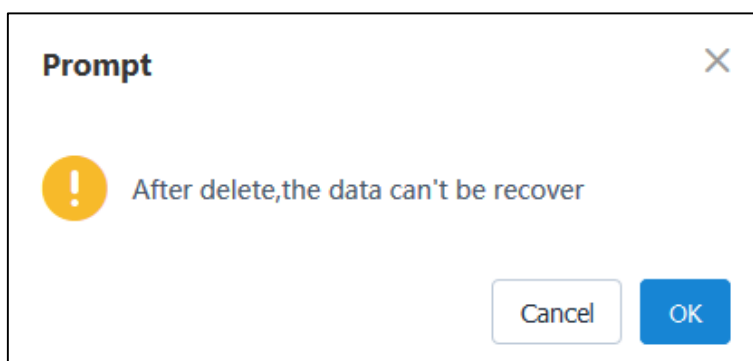

If you want to check all checkboxes, you can check the checkbox as following:

4. Click **Delete**.

The page prompts "After delete, the data can't be recover?".

5. Click **OK**.

## Managing Updated Tasks

### Viewing Updated Tasks

To view the updated tasks:

1. Click **Device management->Timer task**.
2. Select **Updated task**.

Execution time	Task content	Task name	Status
2017/10/16 09:12:15	update_firmware	update firmware version	82%
2017/10/16 09:11:58	update_firmware	update firmware version	1 Fail
2017/10/16 09:06:14	update_firmware	update firmware version	Success
2017/10/16 08:43:30	update_firmware	update firmware version	Success

The page will display execution time, task content and task name.

You can also click the status in **Status** column to view the detail of performance status.

User account	MAC	IP	Model	Status
4555	00:15:6...	10.15.8...	SIP-T48S	success

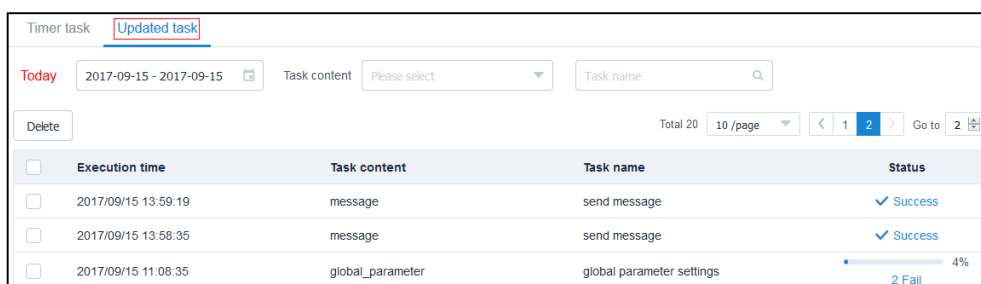

### Searching for Updated Tasks

You can search for updated tasks by task name and task content.

To search for updated tasks:

1. Click **Device management->Timer task**.

2. Select **Updated task**.

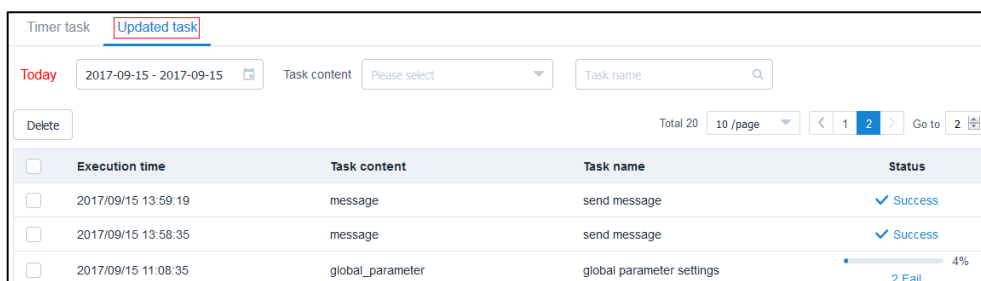

- (Optional.) Select the time in the date selection box.
- Select the desired task content from the pull-down list of **Task content**.
- Enter a few or all characters of task name in the Search box.  
Click or press **Enter** to perform a search.  
The page will display the search results.

## Deleting Updated Tasks

You can delete updated tasks in the Updated task list.

**To delete executed tasks:**

- Click **Device management->Timer task**.
- Select **Updated task**.

- In the Updated task list, you can:
  - Check the desired checkbox besides the execution time.
  - Check the multiple checkboxes besides the execution time.
 If you want to check all checkboxes, you can check the checkbox as following:

- Click **Delete**.

The page prompts "After delete, the data can't be recover?".

5. Click **OK**.

## Managing Configuration Files

After you log into the Yealink device management platform as system administrator or sub-administrator, you can manage configuration files.

Topic includes:

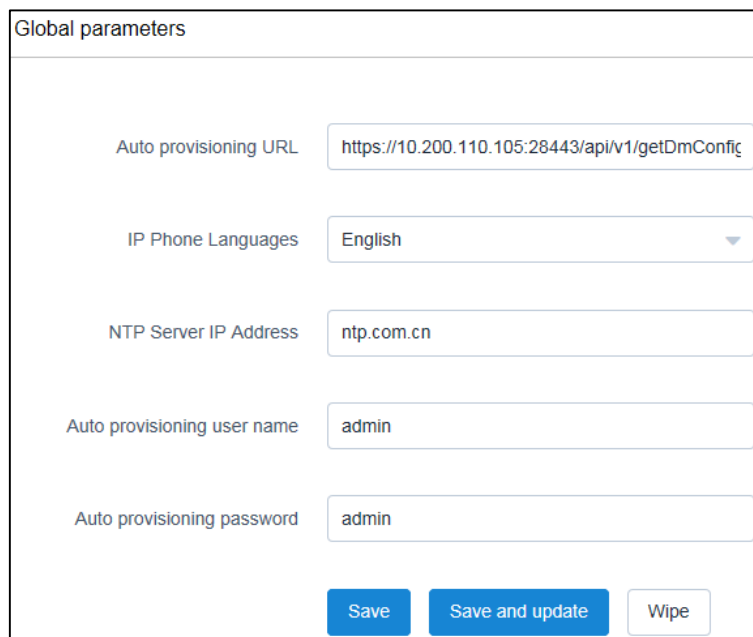

- [Configuring Global Parameters](#)
- [Updating Phone Parameters](#)
- [Editing Configuration Templates](#)
- [Deleting Configuration Templates](#)
- [Configuring the CFG Blocks](#)
- [Configuring the CFG Files Backups](#)

## Configuring Global Parameters

The global parameter applies to the basic parameter of IP phones, such as the auto provisioning URL, auto provisioning username, auto provisioning password, the language of IP phone, NTP server IP address.

**To configure global parameters:**

1. Click **Device setting**->**Global parameters**.
2. Configure the global parameters in the corresponding field.

Global parameters	
Auto provisioning URL	<input type="text" value="https://10.200.110.105:28443/api/v1/getDmConfig"/>
IP Phone Languages	<input type="text" value="English"/>
NTP Server IP Address	<input type="text" value="ntp.com.cn"/>
Auto provisioning user name	<input type="text" value="admin"/>
Auto provisioning password	<input type="text" value="admin"/>
<input type="button" value="Save"/> <input type="button" value="Save and update"/> <input type="button" value="Wipe"/>	

3. Click **Save and update**.

## Updating Phone Parameters

The parameter file influences the parameters of configuration templates.

By default, the version of parameter file is 1.0.0.0.

Before updating the parameter file via Yealink device management platform, you should obtain the parameter file from the Yealink official website: <http://www.yealink.com>.

The following is an example of parameter file:

Parameter	SIP-T48G/SIP-T46G/SIP-T42G/SIP-T41P/SIP-T40P/SIP-VP-T49G	Permitted Value	Default Value	Description	Reboot	Drop-down Option	Directory	Secondary Directory	Display name	Type
account.sign_in_server_address	SIP-T48G/SIP-T46G/SIP-T42G/SIP-T41P/SIP-T40P/SIP-VP-T49G	maxLength:128	Blank	User-name login server address	N	N	Account	Register	Sign In Server Address	string
account.sign_in_user_name	SIP-T48G/SIP-T46G/SIP-T42G/SIP-T41P/SIP-T40P/SIP-VP-T49G	maxLength:128	Blank	User-name login name	N	N	Account	Register	Sign In User Name	string
account.sign_in_password	SIP-T48G/SIP-T46G/SIP-T42G/SIP-T41P/SIP-T40P/SIP-VP-T49G	maxLength:128	Blank	User-name login password	N	N	Account	Register	Sign In Password	string
account.sign_in_pin_number	SIP-T48G/SIP-T46G/SIP-T42G/SIP-T41P/SIP-T40P/SIP-VP-T49G	maxLength:99	Blank	PIN login PIN number	N	N	Account	Register	Sign In PIN Number	string

**To update the phone parameter:**

1. Click **System management** -> **Phone parameter update**.
2. Click **Select** to select the parameter file from the local system, and then click **Upload** to update phone parameters.

Phone parameter update

Current version : 1.0.0.1 Posted on : 2017/09/19 14:32:37

You can download the parameter file from Yealink official website.

Please select upload file

Only support xls file, maximum 2M, file name format xxx\_(v1.0.0.1)

LyncConfig(1.0.0.5).xls

## Editing Configuration Templates

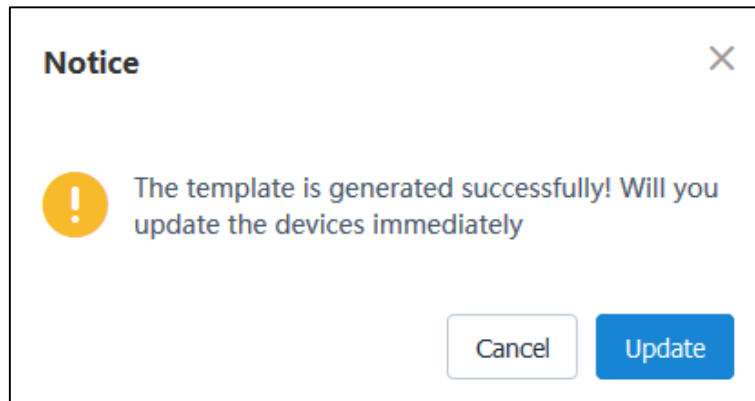

**To edit a configuration template:**

1. Click **Device setting** -> **Template management**.
2. From the left of the page, select the desired template from the **Template name** list.
3. Configure the template name, the IP phone model, description and phone parameters in

the corresponding field you want to edit.

4. Click **Save**.

The page will prompt the notice.

Click **Update**, you will enter the All devices page.

Follow the steps in [To update the configuration file](#) to update the configuration file.

#### Related topics

[Updating Phone Parameters](#)

## Searching for Configuration Templates

You can search for the configuration templates by name.

#### To search for a configuration template:

1. Click **Device setting**->**Template Management**.
2. Enter a few or all characters of configuration template name in the Search box.
3. Click  or press **Enter** to perform a search.

The search result displays in the **Template name** list.

## Deleting Configuration Templates

You can delete configuration templates in the Template name list.

#### To delete a configuration template:

1. Click **Device setting**->**Template management**.
2. From the left of the page, select the desired template from the **Template name** list.
3. Click **Delete**.

The page prompts "Are you sure to delete the template?".

4. Click **Sure**.

## Configuring the CFG Blocks

The CFG block applies to specific IP phones. You can add the CFG block and send it to specific IP phones to complete the quick update.

### Adding the CFG Blocks

**To add CFG blocks:**

1. Click **Device setting**->**CFG block management**.
2. From the top right of the page, click **Add configuration**.
3. Configure the block name, description and IP phone parameters.

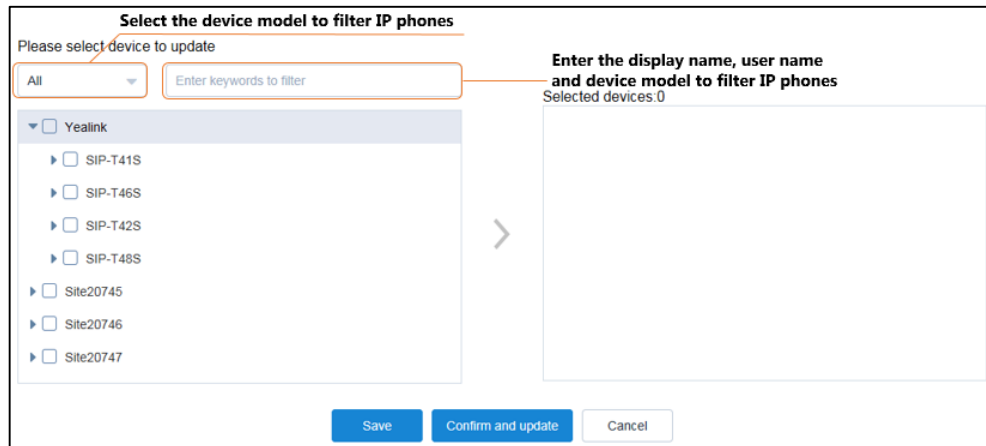

Note that you must configure one IP phone parameter at least.

The image shows the 'Add configuration' form. It has a progress bar with three steps: Step 1 (Enter the basic information), Step 2 (Update to target devices), and Step 3 (Successful). The form has fields for 'Config Block Name' (BlockName68407) and 'Description' (45216). Below these are tabs for 'Account', 'Directory', 'Features', 'Network', 'Security', and 'Settings'. Under 'Settings', there are expandable sections for 'Codec' and 'Basic'. 'Next' and 'Cancel' buttons are at the bottom.

4. Click **Next**.

5. Select the desired IP phones on the left of the page, the IP phones will display in the **Selected Devices** list.

6. Click **Save** to accept the change and update the configuration files of the selected IP phones later.

In CFG block management page, the status of CFG block is "unprovision" in the **Status** column.

You can also click **Confirm and update** to update the configuration files of the selected IP phones at once or at regular time.

Select the desired executive mode:

- If you mark the radio box of **At once**, the configuration files of the selected IP phones will update at once.
- If you mark the radio box of **At the regular time**, the configuration files of the selected IP phones will update will update in the specified time.

Click **OK**.

In CFG block management page, the status is "provisioned" in the **Status** column.

### Related topics

## Viewing the CFG Blocks

To view the phone parameters edited in the CFG block, you can download the CFG file.

### To view the CFG blocks:

1. Click **Device setting**->**CFG block management**.

The page will display the configuration block name, description, status and modify times

You can also check the desired checkbox besides the configuration block name, and then

click  to download the CFG file to your local system.

The following is an example of the CFG file:

```
1 #!version:1.0.0.1
2 account.1.sign_in.pin_number = a
3
4
```

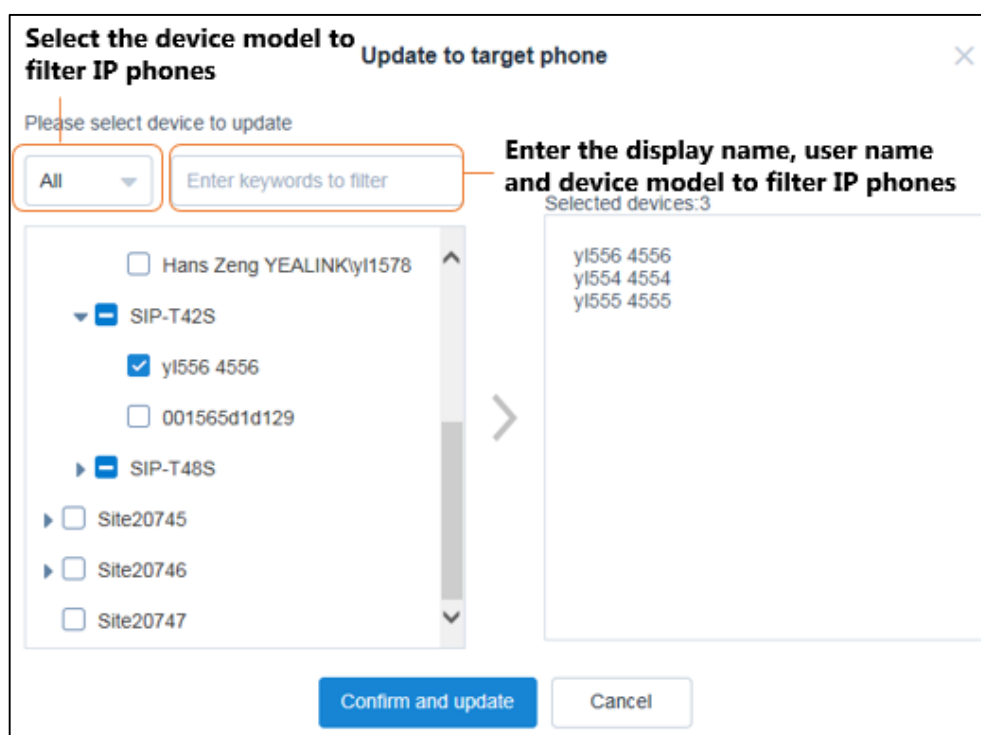

## Editing the CFG Blocks

If the configuration files of the selected IP phones have not updated, the status of CFG block shows “unprovision” in the **Status** column, you can add the IP phones or delete the IP phones in CFG block management page.

You can also edit the CFG blocks information in Edit configuration page.

**To add the IP phones to CFG block in CFG block management page:**

1. Click **Device setting**->**CFG block management**.
2. Check the desired checkbox besides the configuration block name.
3. Click  to add IP phones.

4. Click **Confirm and update** to update the configuration files of the selected IP phones at once.

**To delete the IP phones in CFG block management page:**

1. Click **Device setting**->**CFG block management**.
2. Click **unprovision** in the **Status** column.
3. Select the desired IP phones, and then click  to delete the IP phones.

**To edit the CFG blocks information in Edit configuration page:**

1. Click **Device setting**->**CFG block management**.
2. Check the desired checkbox besides the configuration block name.
3. From the right of page, click  to enter the edit page.
4. Configure the CFG block information in the corresponding field you want to edit.
5. Click **Save** to accept the change and update the configuration files of the selected IP phones later.

You can also click **Confirm and update** to update the configuration files of the selected IP phones at once or at regular time.

Select the desired executive mode:

- If you mark the radio box of **At once**, the configuration files of the selected IP phones will update at once.
- If you mark the radio box of **At the regular time**, the configuration files of the selected IP phones will update will update in the specified time.

Click **OK**.

3. Click  or press **Enter** to perform a search.

## Deleting the CFG Blocks

You can delete CFG blocks in the CFG block management list.

**To delete CFG blocks:**

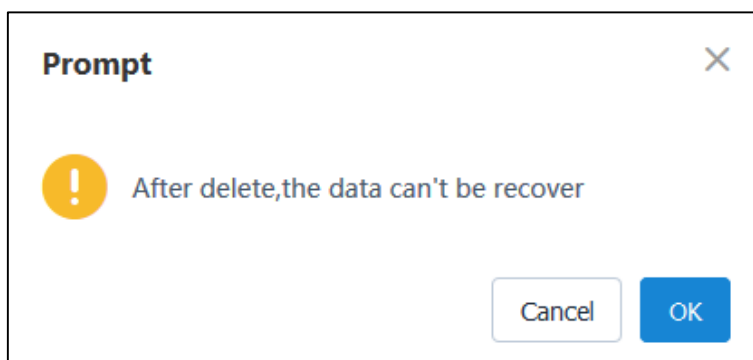

1. Click **Device setting**->**CFG block management**.
2. In the CFG block management list, you can:
  - Check the desired checkbox besides the configuration block name.
  - Check the multiple checkboxes besides the configuration block name.

If you want to check all checkboxes, you can check the checkbox as following:

<input checked="" type="checkbox"/>	Config Block Name	Description	Status	Modify Time	Operation
<input checked="" type="checkbox"/>	123	321	provisioned	2017/09/15 15:57:11	
<input checked="" type="checkbox"/>	test223	托尔斯基32	provisioned	2017/09/15 14:35:07	
<input checked="" type="checkbox"/>	test123	test23	unprovision	2017/09/15 14:31:32	

3. Click **Delete**.

The page prompts "After delete, the data can't be recover?".

4. Click **OK**.

## Configuring the CFG Files Backups

### Backing up Configuration Files

#### Generating Configuration Files

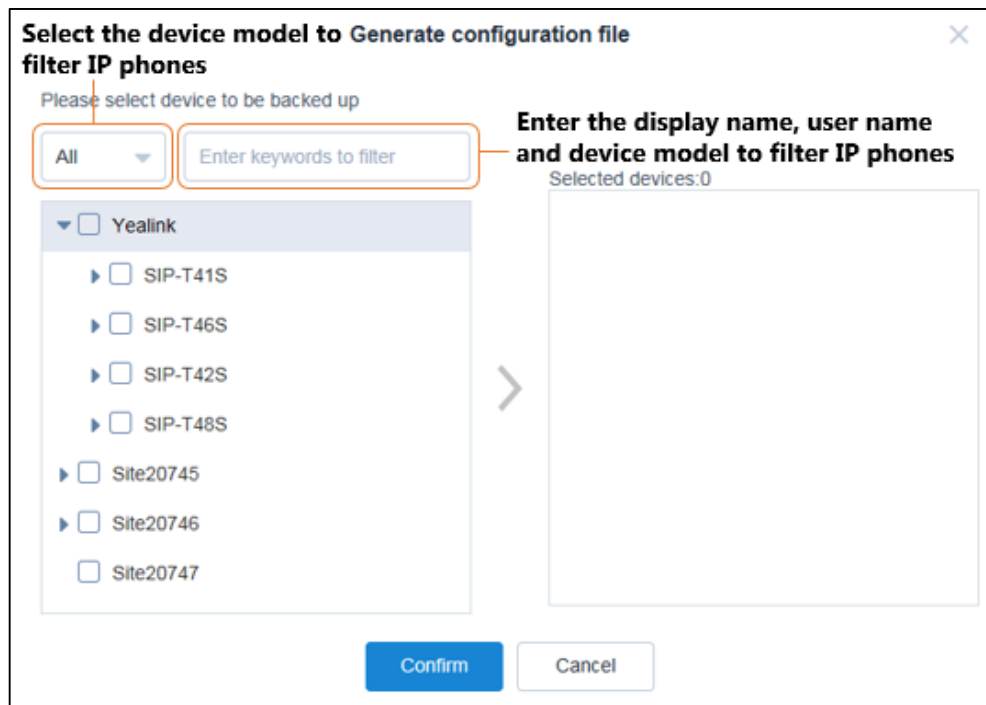

You can generate configuration files of IP phones and create a backup.

**To generate configuration files:**

1. Click **Device setting**->**CFG file backup**.
2. Click **Generate configuration file**.

<input type="checkbox"/>	MAC Address	Name	Size(KB)	Date	Operation
<input type="checkbox"/>	00:15:65:c0:bc:c2	001565c0bcc2.bin	266.02	2017/09/15 10:51:06	

3. Select the desired IP phones.

4. Click **Confirm**.

## Uploading Configuration Files

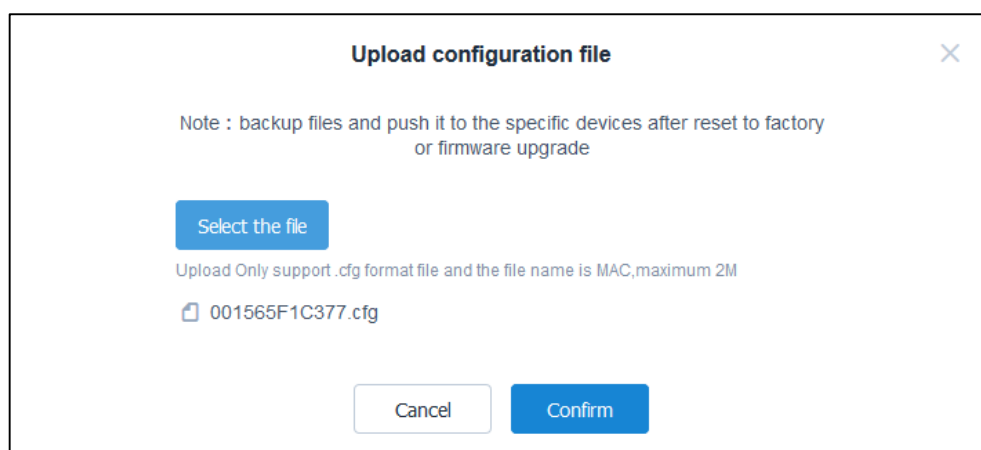

When the current backup was saved in the local system, you can upload the backup in the batch. Note that the backup of IP phone must be named by MAC address and is the .cfg file.

**To upload configuration files:**

1. Click **Device setting->CFG file backup**.
2. Click **Upload configuration file**.

MAC Address	Name	Size(KB)	Date	Operation	
<input type="checkbox"/>	00:15:65:c0:bc:c2	001565c0bcc2.bin	266.02	2017/09/15 10:51:06	
<input type="checkbox"/>	00:15:65:10:17:3b	00156510173b.bin	260.52	2017/09/15 10:51:02	

3. Click **Select the file** to select the backup from the local system.

4. Click **Confirm**.

## Viewing Backups

### To view backups:

1. Click **Device setting->CFG file backup**.

The page will display MAC address, the backup name, the backup size and the date of generating the backup.

You can also click **Export** on the top right of the page to export all backups, and then save it in the local system.

## Searching for Backups

You can search for the CFG file backups by the backup name and MAC address.

### To search for the backup:

1. Click **Device setting->CFG block management**.
2. Enter a few or all characters of the backup name and MAC address in the Search box.
3. Click  or press **Enter** to perform a search.

## Downloading Backups

You can download the backup to apply to others platforms.

### To download backups:

1. Click **Device setting->CFG file backup**.
2. Check the desired checkbox besides the MAC address.
3. Click  to download the backup to your local system.

## Restoring Backups

When the IP phones are reset to factory or the firmware is updated, you can select the desired backup in CFG file backup list to restore.

### To restore backups in the CFG file backup list:

1. Click **Device setting**->**CFG file backup**.
2. Check the desired checkbox besides the MAC address.
3. Click  to send the backup to IP phones and restore backups.

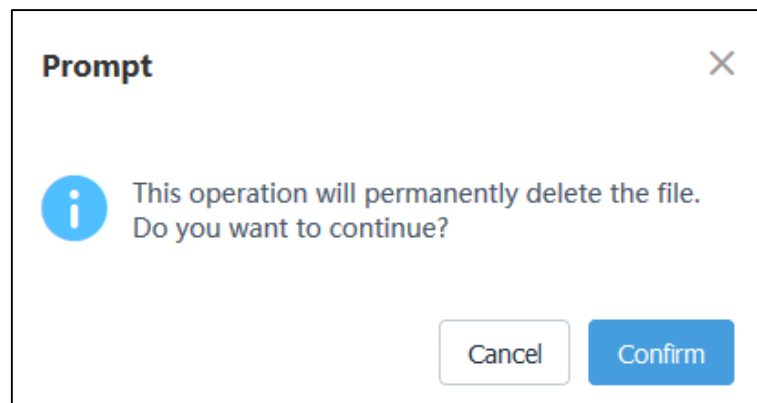

## Deleting Backups

You can delete backups in the CFG file backup list.

### To delete a backup:

1. Click **Device setting**->**CFG file backup**.
2. Check the desired checkbox besides the MAC address.
3. Click .

The page prompts "This operation will permanently delete the file. Do you want to continue?".

4. Click **Confirm**.

### To delete multiple backups:

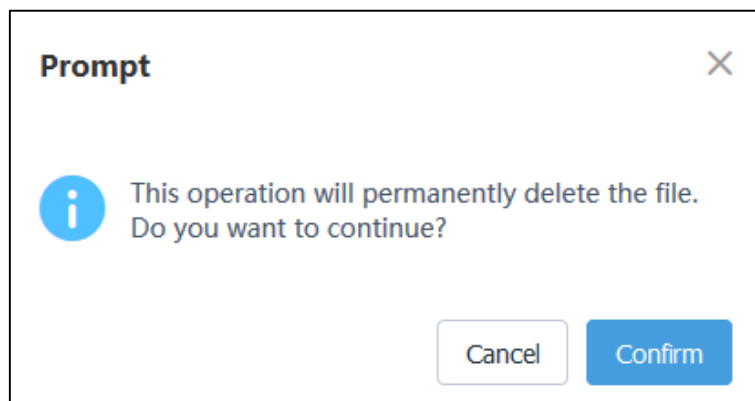

1. Click **Device setting**->**CFG file backup**.
2. In the CFG file backup list, you can:
  - Check the desired checkbox besides the MAC address.
  - Check the multiple checkboxes besides the MAC address.

If you want to check all checkboxes, you can check the checkbox as following:

<input checked="" type="checkbox"/>	MAC Address	Name	Size(KB)	Date	Operation
<input checked="" type="checkbox"/>	00:15:65:c0:bc:c2	001565c0bcc2.bin	266.02	2017/09/15 10:51:06	  
<input checked="" type="checkbox"/>	00:15:65:f0:17:3b	001565f0173b.bin	260.52	2017/09/15 10:51:02	  
<input checked="" type="checkbox"/>	00:15:65:c6:9d:03	001565c69d03.bin	261.02	2017/09/15 10:50:58	  

3. Click **Delete**.

The page prompts "This operation will permanently delete the file. Do you want to continue?".

4. Click **Confirm**.

# Managing Resources

---

After you log into the Yealink device management platform as system administrator or sub-administrator, you can manage resources, the resources include the firmware, the BToE connector, Skype for Business licenses, MOH, ringtone, language package, XML contact.

Topic includes:

- [Editing Resources](#)
- [Searching for Resources](#)
- [Downloading Resources](#)
- [Deleting Resources](#)

## Editing Resources

**To edit resources:**

1. Click **System management** -> **Resources management**.
2. Check the desired checkbox besides the name.
3. Click .
4. Configure the resource information in the corresponding field.
5. Click **Save**.

**Related topics**

[Updating the Phone Firmware](#)

[Updating Configuration Files](#)

[Updating the Yealink Better Together over Ethernet Connector](#)

[Uploading the Skype for Business License](#)

[Music on Hold](#)

[Upgrading a Normal Ringtone](#)

[Uploading a Language Package](#)

[Importing Contact Lists](#)

[Uploading a Trusted Certificate](#)

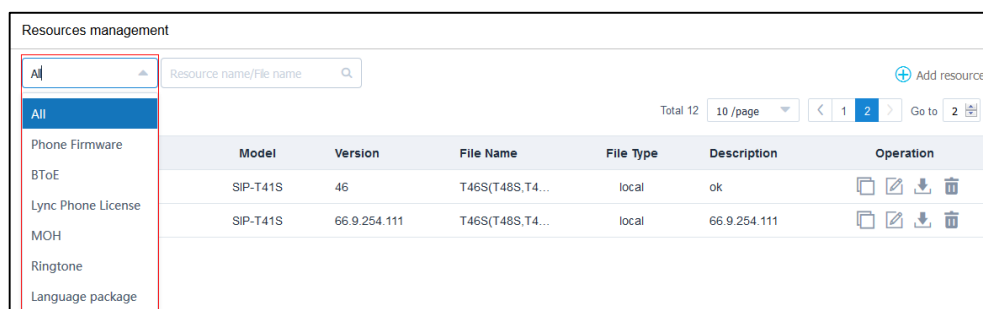

[Uploading a Device Certificate](#)

## Searching for Resources

You can search for resources by the name and file name.

**To search for the resources:**

1. Click **System management** -> **Resources management**.
2. Select the type of resources from the pull-down list.

3. Enter a few or all characters of the name and file name in the Search box.
4. Click  or press **Enter** to perform a search.

## Downloading Resources

You can download the resources to apply to others platforms.

**To download resources:**

1. Click **System management** -> **Resources management**.
2. Check the desired checkbox besides the name.
3. Click , and then save it to your local system.

## Deleting Resources

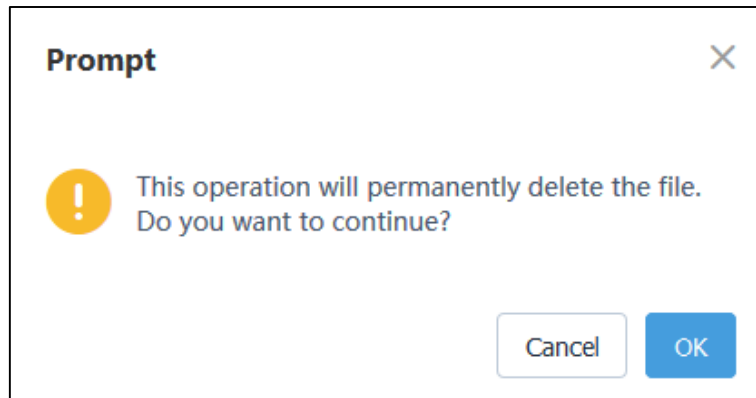

You can delete resources in the resources management list.

Note that if the IP phone is executing the task using the resource, you cannot delete the resource until the IP phone finish the task.

**To delete a resource:**

1. Click **System management** -> **Resources management**.
2. Check the desired checkbox besides the name.
3. Click .

The page prompts "This operation will permanently delete the file. Do you want to continue?".

4. Click **OK**.

**To delete multiple resources:**

1. Click **System management -> Resources management**.

2. In the resources management list, you can:

- Check the desired checkbox besides the name.
- Check the multiple checkboxes besides the name.

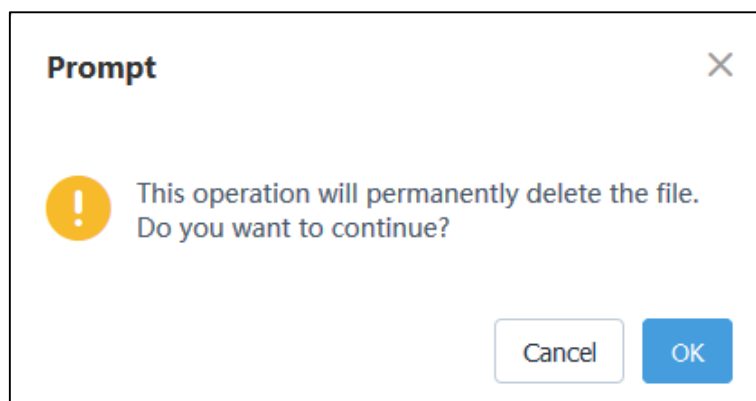

If you want to check all checkboxes, you can check the checkbox as following:

<input checked="" type="checkbox"/>	Name	Model	Version	File Name	File Type	Description	Operation
<input checked="" type="checkbox"/>	111	SIP-T41S	66.9.254.111	T46S(T48S,T4...	local	66.9.254.111	

3. Click **Delete**.

<input type="checkbox"/>	Name	Model	Version	File Name	File Type	Description	Operation
<input type="checkbox"/>	111	SIP-T41S	66.9.254.111	T46S(T48S,T4...	local	66.9.254.111	

The page prompts "This operation will permanently delete the file. Do you want to continue?".

4. Click **OK**.

# Troubleshooting

After you log into the Yealink device management platform as system administrator or sub-administrator, you can view the chapter to obtain general troubleshooting information to help you solve problems you might encounter when using Yealink device management platform.

## System Diagnostics

### Viewing Operation Log Files

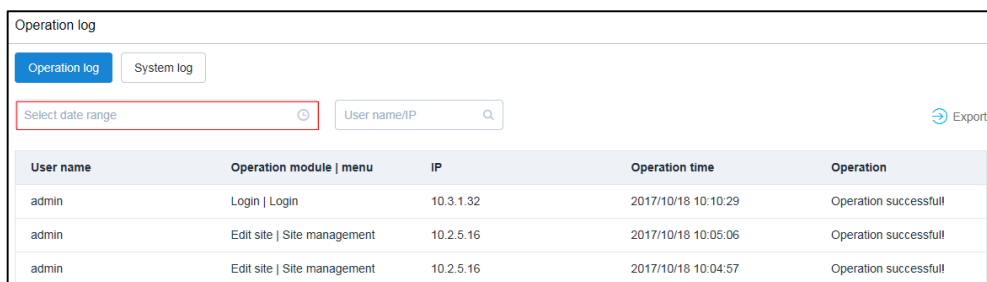

Operation logs record the operation that the administrator manages the Yealink device management.

**To view operation log files:**

1. Click **System management**->**Log management**.
2. Select **Operation log**.

3. (Optional.) Select time. The page will display the operation file during the selected time.

4. (Optional.) Enter the a few or all characters of device name or the local IP address in the Search box to search for the desired operation file to view.

The page will display user name, operation module/menu, the local IP address, operation time and operation status.

You can also click **Export** on the top right of the page to export all operation log files, and then save it in the local system.

The following is an example of operation log file:

User name	Operation module   menu	IP	Operation time	Instructions
admin	Export audit   System management	10.2.5.16	2017/10/18	Operation successful
admin	Login   Login	10.2.61.164	2017/10/18	Operation successful
admin	Login   Login	10.2.61.164	2017/10/18	Operation successful
admin	Add config group   Device setting	10.2.5.16	2017/10/18	Operation successful
admin	Login   Login	10.2.61.164	2017/10/18	Operation successful

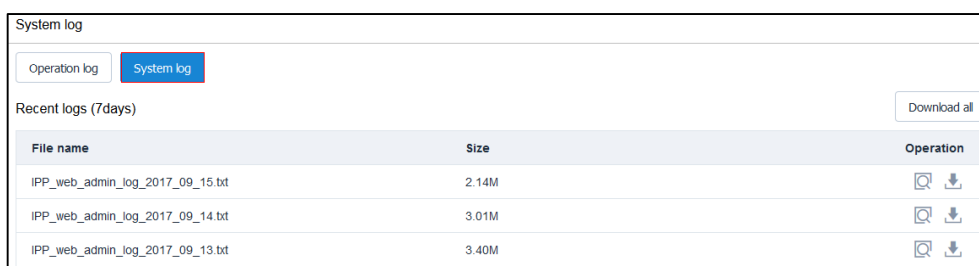

## Viewing System Log Files

System logs record the key process or abnormal status related the Yealink device management platform in recent 7 days, such as whether the parameter reported by IP phones is correct or the process of sending configuration files to IP phones by the platform.

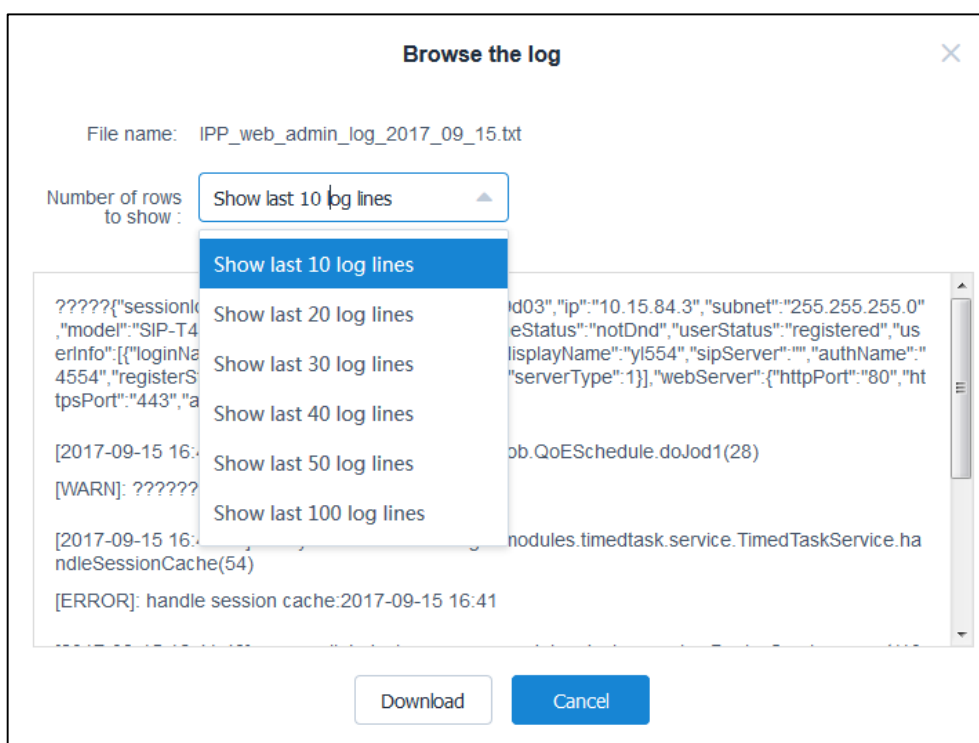

You can view the system logs online or download the log files to your local system to view logs.

**To view system log files online:**

1. Click **System management->Log management**.
2. Select **System log**.

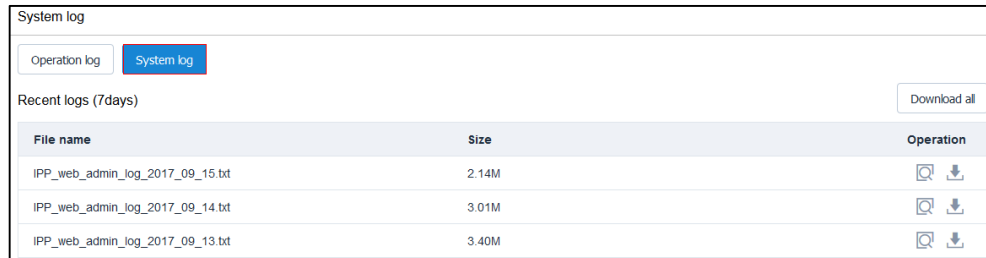

3. Select the desired system log in the system log list, and then click  .

4. Select the desired number of rows in the **Number of rows to show** field.

**To view system log files by downloading the log files to your local system:**

1. Click **System management->Log management**.
2. Select **System log**.

3. In the system log list, select the desired system log, and then click to download the system log and save it to your local system.

The following is an example of system log file:

```

You can also click **Download all** on the right of page to download all system log files and save it to your local system.

## Device Diagnostics

In Device diagnostic page, you can view the backups of IP phone log files and obtain the diagnostic information of IP phones, and then analyze it to troubleshoot problems.

You can enter the Device diagnostic page in the following ways:

- In the All devices page
- In the Warning list page
- In the Device diagnostic page

## Viewing the Syslog Files of Devices

The IP phone will send syslog messages to the Yealink device management platform in real time. You can specify the severity level of the syslog to be sent to the platform.

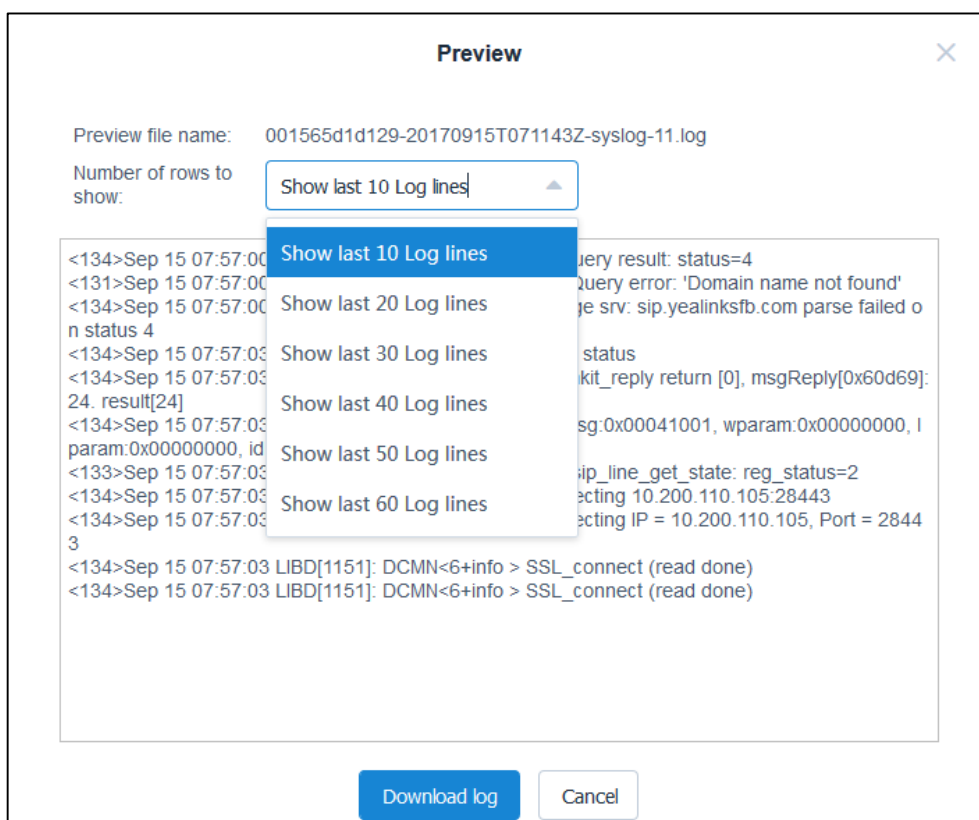

You can view the backups of local log files or export the latest local log files to view.

**To view the backups of IP phone log files online in the Device diagnostic page:**

1. Click **Device diagnostic**.
2. Enter the MAC address of IP phone, and then click **Start the diagnosis**.

3. Select the desired backups of IP phone log files the Recent logs list, and then click .
4. Select the desired number of rows in the **Number of rows to show** field.

**To view the backups of IP phone log files by downloading the backups in the Device diagnostic page:**

1. Click **Device diagnostic**.

- Enter the MAC address of IP phone, and then click **Start the diagnosis**.

- In the Recent logs list, select the desired backups of IP phone log files, and then click  to download the backups of IP phone log files and save it to your local system.

The following is an example of IP phone log file:

```

```

You can also click **Download all** on the right of page to download all backups of IP phone log files and save it to your local system.

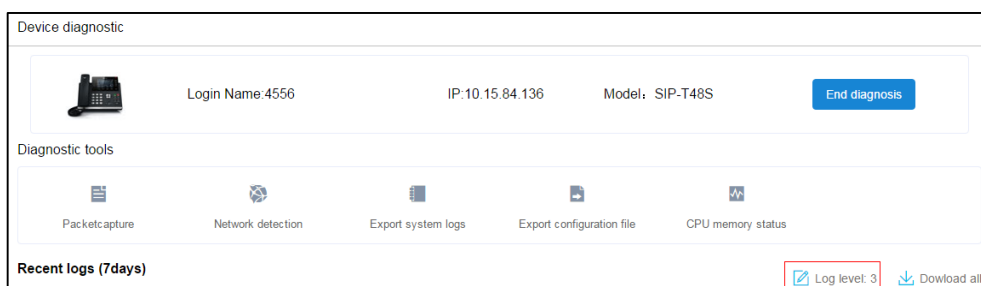

File Name	Time	Size(KB)	Operation
001565d1d129-20170915T071143Z-syslog-11.log	2017/09/15 15:56:41	90.05	 
001565d1d129-20170915T071143Z-syslog-10.log	2017/09/15 15:32:05	90.34	 
001565d1d129-20170915T071143Z-syslog-9.log	2017/09/15 15:26:54	90.05	 
001565444429-20170915T071143Z-syslog-8.log	2017/09/15 15:26:34	90.02	 

**To view the IP phone log files by exporting the latest IP phone log file in the Device diagnostic page:**

- Click **Device diagnostic**.
- Enter the MAC address of IP phone, and then click **Start the diagnosis**.

- (Optional.) Click **Log level:3** to specify the severity level of the syslog.

- Click **Export system logs**, and then save it to your local system.

## Capturing Packets

**To capture packets:**

- Click **Device diagnostic**.
- Enter the MAC address of IP phone, and then click **Start the diagnosis**.

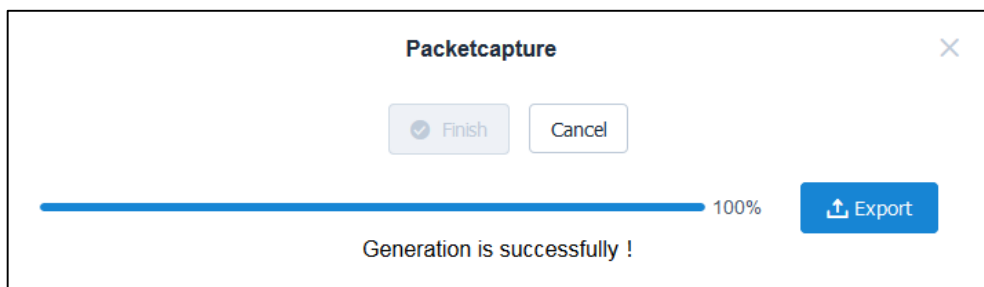

- Click **Packetcapture**.

4. Click **Start** to begin capturing signal traffic.

5. Recreate the error to be documented in the trace.
6. Click **Finish** to stop the capture.
7. Click **Export**, and then save it to your local system.

**Note** If the IP phones is offline, you cannot capture packets.

## Network Diagnostics

Network diagnostics includes:

- **Ping:** Check whether the network between the local and the remote system is connected.
- **Trace Route:** Display the route (path) and measure transit delays of packets across an Internet Protocol (IP) network.

### Ping:

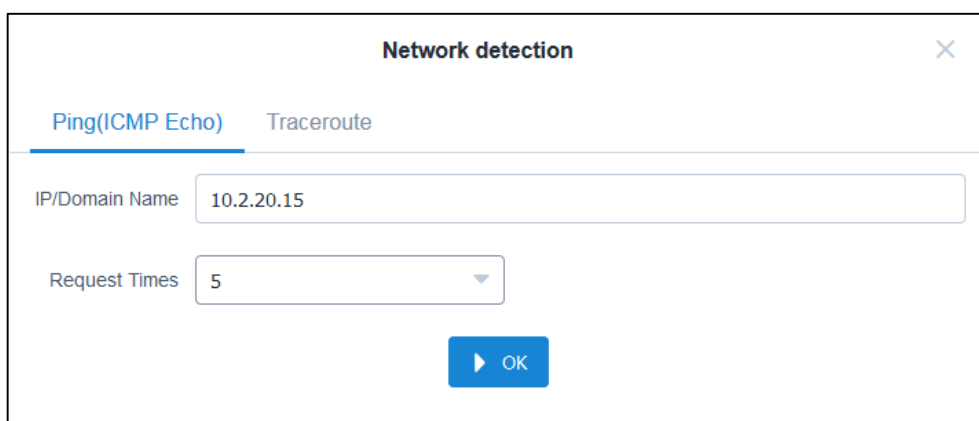

1. Click **Device diagnostic**.
2. Enter the MAC address of IP phone, and then click **Start the diagnosis**.

3. Click **Network detection**.

4. Select **Ping(ICMP Echo)**.

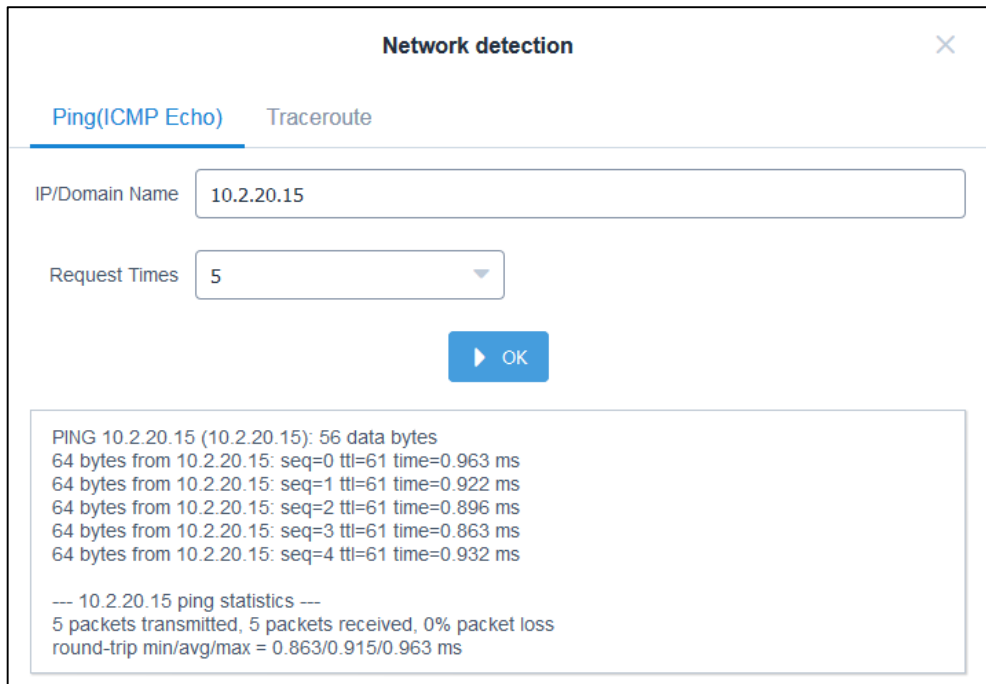

5. Enter any IP address (for example, the IP address of the remote system) or domain name in the **IP/Domain Name** field.

It measures the round-trip time from transmission to reception and reports errors and packet loss. The results of the test include a statistical summary of the response packets received, including the minimum, maximum, and the mean round-trip times.

6. Select the request time from the pull-down list of **Request Times**.

7. Click **OK** to start.

**Trace route:**

1. Click **Device diagnostic**.
2. Enter the MAC address of IP phone, and then click **Start the diagnosis**.

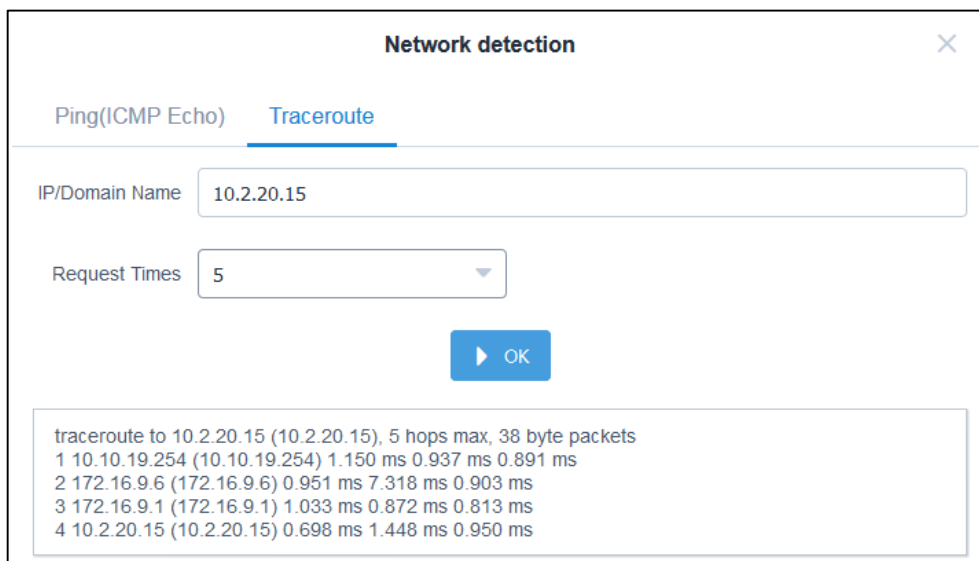

3. Click **Network detection**.

4. Select **Traceroute**.
5. Enter any IP address (for example, the IP address of the remote system) or domain name in the **IP/Domain Name** field.

If the test is successful, the platform lists the hops between the system and the IP address you entered. You can check whether congestion happens via the time cost between hops.

6. Select the request time from the pull-down list of **Request Times**.
7. Click **OK** to start.

## Exporting Configuration Files

You can export configuration files of IP phones to help analyze problems.

**To export configuration files:**

1. Click **Device diagnostic**.
2. Enter the MAC address of IP phone, and then click **Start the diagnosis**.

3. Select **Export configuration file**, and then save it to your local system.

## Viewing the CPU and Memory Status

When the call quality is bad, you can view the CPU and memory status of IP phone. The IP phones will report the CPU and memory information to the platform per 15 minutes.

### To view the CPU and memory status:

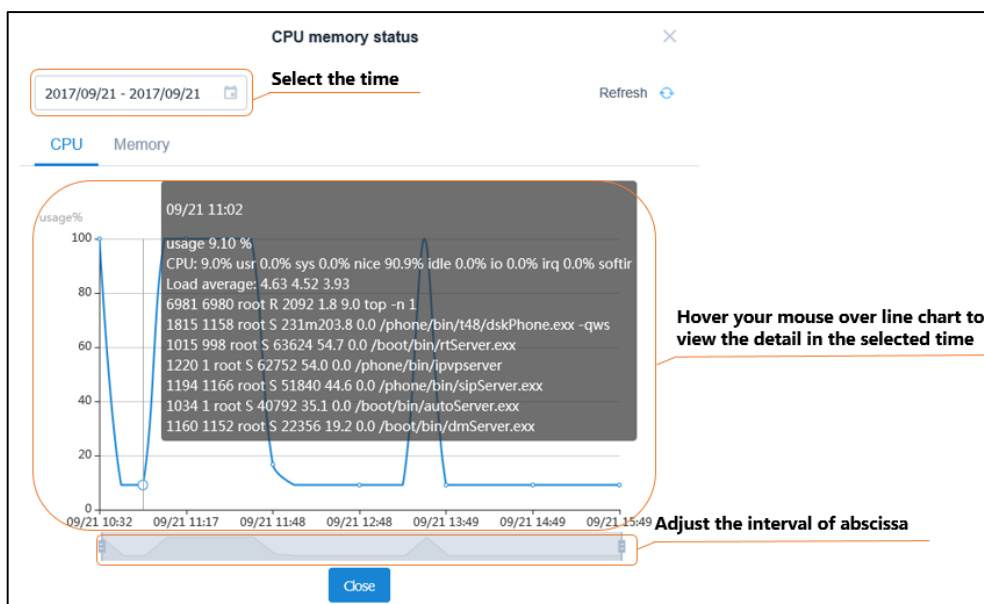

1. Click **Device diagnostic**.
2. Enter the MAC address of IP phone, and then click **Start the diagnosis**.

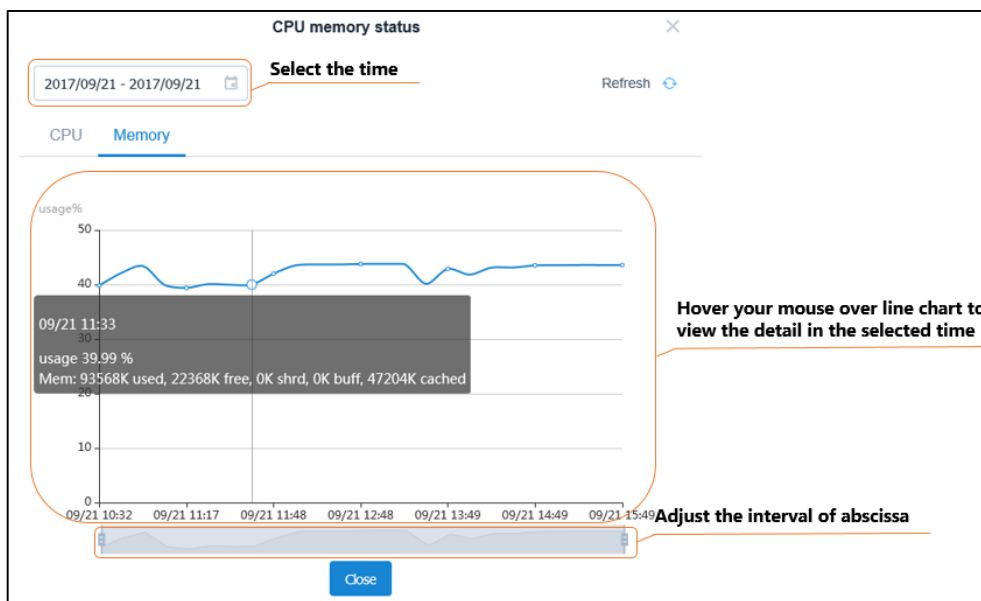

3. Select **CPU memory status**.

4. You can do one of the following:
  - Click **CPU** to view the CPU usage in the specified time.

- Click **Memory** to view the memory usage in the specified time.

## Troubleshooting Solutions

### Restarting Devices

**To restart devices:**

1. Click **Device management**->**All devices**.
2. Check the checkbox or multiple checkboxes besides the device name.
3. Click **Restart**.

Device name	Firmware version	Site	Device Type	MAC	Report time	Phone status	Operation
<input type="checkbox"/> y554	66.9.252.47	haodela	SIP-T46S	00:15:65:10:1...	2017/09/20 14:18:55	Registered	[Icon]
<input type="checkbox"/> 黄颖艺	66.9.252.47	11111	SIP-T46S	00:15:65:c0...	2017/09/20 14:18:54	Registered	[Icon]

4. Select the desired executive mode:
  - If you mark the radio box of **At once**, the IP phones will restart at once.
  - If you mark the radio box of **At regular time**, configure the task name, repeat type and the execution time, the IP phones will restart in the specified time.
5. Click **OK**.

#### Related topics

## Resetting the Devices to Factory

Reset the IP phones to factory configurations after you have tried almost all troubleshooting suggestions but do not solve the problem.

### To reset the IP phones to factory:

1. Click **Device management**->**All devices**.
2. Check the checkbox or multiple checkboxes besides the device name.
3. Click **More**, and then select **Reset to factory** from the pull down list.

4. Select the desired executive mode:
  - If you mark the radio box of **At once**, the IP phone will be reset at once.
  - If you mark the radio box of **At regular time**, configure the task name, repeat type and the execution time, the IP phone will be reset in the specified time.
5. Click **OK**.  
All configurations and user data on the IP phone will be reset.

## General Issues

### Why cannot you access the login page of Yealink device management platform

#### Question

When you access the login page of Yealink device management platform, the error message is displayed as shown next:

#### Cause

The firewall of your server which is installed Yealink device management platform may be active.

#### To check the status of firewalls (log into CentOS as the root user):

1. Enter terminal.
2. Run the command:  
`systemctl status firewalld`

```
[root@localhost ~]# systemctl status firewalld
â firewallld.service - firewalld - dynamic firewall daemon
   Loaded: loaded (/usr/lib/systemd/system/firewalld.service; enabled; vendor preset: enabled)
   Active: active (running) since Wed 2017-11-01 06:34:55 EDT; 9min ago
   Main PID: 23324 (firewalld)
   CGroup: /system.slice/firewalld.service
           └─23324 /usr/bin/python -Es /usr/sbin/firewalld --nofork --nopid

Nov 01 06:34:54 localhost.localdomain systemd[1]: Starting firewalld - dynamic firewall daemon...
Nov 01 06:34:55 localhost.localdomain systemd[1]: Started firewalld - dynamic firewall daemon.
```

If the firewall is active, you should run the following commands to enable the related ports in the firewall configuration:

```
firewall-cmd --permanent --zone=public --add-port=18443/tcp  
firewall-cmd --permanent --zone=public --add-port=28443/tcp  
firewall-cmd --permanent --zone=public --add-port=28080/tcp  
firewall-cmd --reload
```

```
[root@localhost ~]# firewall-cmd --permanent --zone=public --add-port=8080-8081/tcp^C  
[root@localhost ~]# firewall-cmd --permanent --zone=public --add-port=18443/tcp  
success  
[root@localhost ~]# firewall-cmd --permanent --zone=public --add-port=28443/tcp  
success  
[root@localhost ~]# firewall-cmd --permanent --zone=public --add-port=28080/tcp  
success  
[root@localhost ~]# firewall-cmd --reload  
success
```

After you finish the configuration, refresh the login page, you can access the login page successfully.
