

March 31, 2022

To whom it may concern:

As part of Yealink (Xiamen) Network Technology CO., Ltd's ongoing commitment to ensuring the security and integrity of its systems and data, Yealink (Xiamen) Network Technology CO., Ltd engaged NetSPI to perform an Application Penetration Test against RPS; this testing was concluded on March 11, 2022. The purpose of this penetration test was to identify common security issues that could adversely affect the confidentiality, integrity, or availability of the application and related data.

NetSPI security consultants follow a phased assessment approach for testing the security of applications. NetSPI consultants use multiple commercial and open source security tools, custom scripts, and manual techniques to scan for, identify, and exploit vulnerabilities within applications.

NetSPI uses a combination of automated tools and manual penetration testing processes to identify missing, broken, and improperly used application security controls. NetSPI security consultants attempt to penetrate or circumvent existing security mechanisms by using tools, exploit scripts, and techniques that are similar to those used by attackers. The testing targets common vulnerabilities, including the OWASP Top Ten (<http://www.owasp.org>) and other flaws typical of similar applications. In this manner, our approach analyzes the current security posture and results in recommendations for strengthening security controls.

Sincerely,
Charles Horton
COO
